

Statistical problems - drawing conclusions

1 In a data investigation, the _____ is the entire set of people, creatures, plants or items that make up the whole group which is being studied. Tick **1** correct answer

☐ correlation

☐ extrapolation

☒ population

☐ sample

2 Correlation is the relationship between two variables on a scatter graph. Fill in the blank

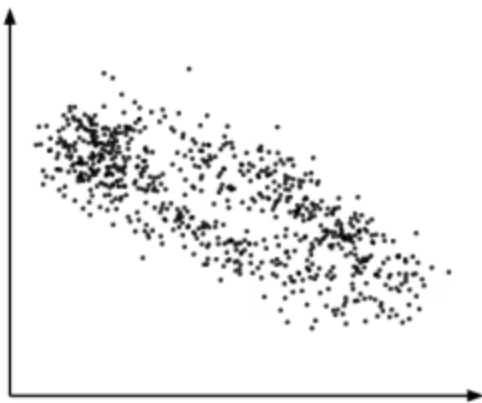

3 Extrapolation is the process of estimating unknown values that are _____. Tick **1** correct answer

☐ based on the mean of the data

☐ inside the range of existing data

☒ outside the range of existing data

4 What type of correlation does the scatter graph show? Tick **1** correct answer

☒ negative correlation

☐ no correlation

☐ positive correlation

5 A data investigation finds a positive correlation between temperature and ice cream sales. What does this suggest? Tick **1** correct answer

- ☐ As the temperature increases, the number of ice cream sales decreases.
- ☒ As the temperature increases, the number of ice cream sales also increases.
- ☐ There is no relationship between the temperature and ice cream sales.
- ☐ Ice cream sales cause the temperature to increase

6 The mean for the following numbers data set 8.2, 7.4, 11.3, 9.1 is 9. Fill in the blank
