

Calculating the mean

Task A: Calculating the mean from a line graph

- 1) Use the line graph to complete the table of data.

Jan	
Feb	
Mar	
Apr	
May	
Jun	
Jul	
Aug	
Sep	
Oct	
Nov	
Dec	

- 2) Calculate the mean of each data set shown on the line graph.

Task B: Calculating the mean from an ungrouped frequency table

1) A class take a quiz, marked out of 6.

The frequency table shows the results for the class.

Quiz score	0	1	2	3	4	5	6
Frequency	3	4	4	7	10	4	1

- How many pupils are in the class?
- How many marks did the class get as a group?
- Hence, what is the mean marks per pupil?

2) The frequency table shows the number of bedrooms in different houses within an area of a town.

Which calculation correctly finds the mean for this frequency table? For each incorrect answer, why is it wrong?

Bedrooms	Frequency
1	20
2	93
3	54
4	33

a) $\frac{500}{200} = 2.5$

b) $\frac{200}{10} = 20$

c) $\frac{500}{4} = 125$

d) $\frac{500}{10} = 50$

e) $\frac{200}{4} = 50$

f) $\frac{10}{200} = 0.05$

Task C: Calculating the mean from a bar chart

1) This bar chart shows the number of cars per household.

a) How many households are there?

b) How many cars are there in total across all households?

c) What is the mean number of cars per household?

2) The bar chart shows the length of time customers spent waiting at a self-service till (to the nearest minute).

What is the mean wait time?
