

Calculating the mode

Task A: Mode from a frequency table

- 1) What is the mode for each frequency table? If there is no mode, write no mode.

Animal	Frequency
cat	24
dog	18
fish	11
rabbit	15

cat

Goals	Frequency
0	16
1	24
2	24
3	19

1 and 2 goals

Score	Frequency
1	12
2	12
3	12
4	12

no mode

- 2) A data set of 50 is represented on this frequency table.

Fill in the missing frequency and write down the mode number of goals scored.

3 goals scored

Goals	Frequency
0	9
1	9
2	11
3	21

Task B: Mode from bar charts

1) What is the mode on each of these bar charts?

a)

b)

2) The data is bimodal.
Complete the bar chart.

Bimodal means it has two that appear the most, more than any others.

3) 100 pieces of data are represented on a bar chart.
The data is bimodal.
Add the two missing bars.

Task C: Mode from line graphs

1) What is the modal temperature for each place?

Bradford - no mode

*Eastbourne - trimodal
14°C, 18°C and 24°C*

Tiree - bimodal 9°C and 16°C
