

Finding the perimeter of polygons

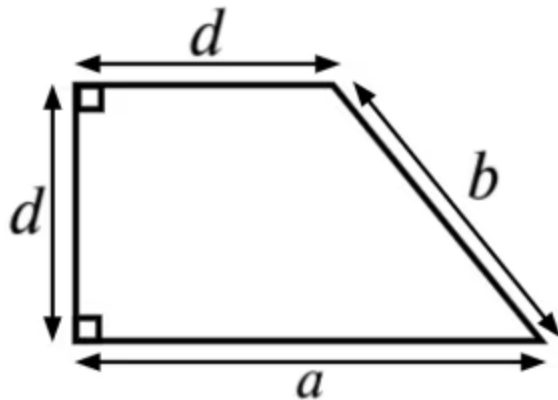

- 1 Perimeter is the distance around a 2D shape. It can be calculated by summing all of the edges together. Fill in the blank
- 2 True or false? Number bonds can be used to calculate the perimeter more efficiently. Tick **1** correct answer
- ☒ True
- ☐ False
- 3 Which of these formulas could **not** be used to calculate the perimeter (P) of this square? Tick **1** correct answer

- ☐ $P = 4b$
- ☐ $P = 2b + 2b$
- ☐ $P = 3b + b$
- ☒ $P = b + b + b + b + b$

- 4 Complete the formula for the perimeter of this trapezium. $P = \underline{a + b + 2d}$ Fill in the blank

- 5 You can write a formula to calculate the perimeter in an efficient way. Fill in the blank
- 6 What is the mathematical name for the polygon whose perimeter (P) can be calculated using the formula $P = t + r + 2w + y$? Tick **1** correct answer
- ☐ triangle
 - ☐ quadrilateral
 - ☒ pentagon
 - ☐ hexagon
