

Properties of prisms

Task A: Defining a prism

1) Which of these match the properties of a **prism**?

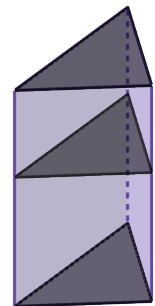

2) Complete the sentences with the missing words provided to give an explanation of what a **prism** is.

A **prism** is a _____ object.

All of its 2D **cross sections** must be _____.

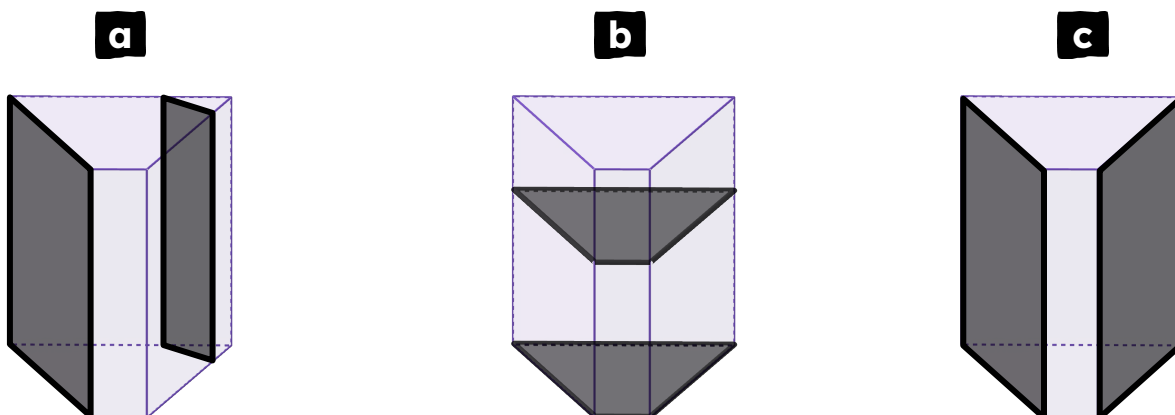

In at least one direction, all _____ **cross sections** must be _____ to each other.

- | | | | |
|----|----------|---------------|-------------|
| 2D | circular | parallel | congruent |
| 3D | polygons | perpendicular | equidistant |

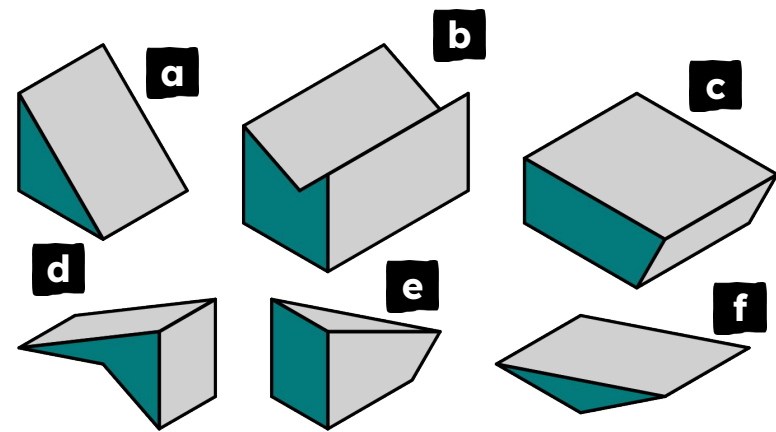

3) These diagrams all show the same **prism**.

Which of the diagrams show the correct **cross sections** that help demonstrate it is a **pris**?. Explain how you know.

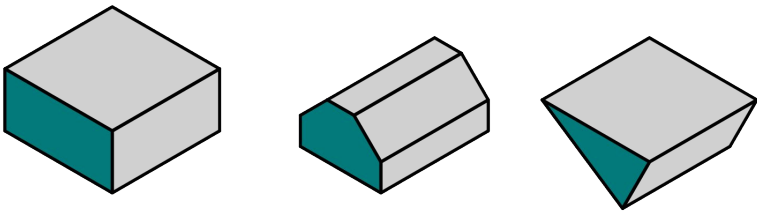

Task B: Categorising prisms

1) Place these 3D shapes into the correct row in the table.

triangular prism
quadrilateral prism
pentagonal prism
not a prism

2) On squared paper, sketch the **cross sectional polygon** for each of these **prisms**.

3) Write down a suitable name for each **prism**.
