

Checking understanding of area

Task A: Areas of rectangles, triangles and parallelograms

Find the area of each shape.

$$\text{area} = 24 \text{ units}^2$$

$$\text{area} = 10 \text{ cm}^2$$

$$\text{area} = 90 \text{ cm}^2$$

$$\text{area} = 64 \text{ mm}^2$$

$$\text{area} = 15 \text{ cm}^2$$

$$\text{area} = 54 \text{ m}^2$$

Task B: Areas of trapezia

1) The letters inside each shape represents its area.

a) Use each letter once to fill in the gaps in the calculations.

Multiple solutions exist.

Possible solution:

$$T = F + B + D$$

$$T = C + E$$

$$T = G + H$$

$$T = A \div 2$$

For other alternatives, find the area of each shape and check that all the calculations give 15.

b) Find the value of T.

$$T = 15 \text{ units}^2$$

2) All of the shapes below are trapezia.

For a trapezium with parallel sides a and b : $A = \frac{1}{2}(a + b)h$

Use the formula or any other method to calculate the area of each trapezium.

$$16 \text{ cm}^2$$

$$10 \text{ cm}^2$$

$$15 \text{ cm}^2$$

Task C: Areas of composite shapes

1) Find the area of each composite shape.

a)

$$35 \text{ cm}^2$$

b)

$$23 \text{ mm}^2$$

c)

$$18 \text{ cm}^2$$
