

Name: \_\_\_\_\_

## Checking understanding of area

### Task A: Areas of rectangles, triangles and parallelograms

Find the area of each shape.

area = \_\_\_\_ units<sup>2</sup>

area = \_\_\_\_ cm<sup>2</sup>

area = \_\_\_\_

area = \_\_\_\_

area = \_\_\_\_

area = \_\_\_\_

## Task B: Areas of trapezia

1) The letters inside each shape represents its area.

a) Use each letter once to fill in the gaps in the calculations.

Multiple solutions exist.

$$T = F + \underline{\quad} + \underline{\quad}$$

$$T = \underline{\quad} + \underline{\quad}$$

$$T = \underline{\quad} + \underline{\quad}$$

$$T = \underline{\quad} \div 2$$

b) Find the value of T.

$$T = \underline{\quad} \text{ units}^2$$

2) All of the shapes below are trapezia.

For a trapezium with parallel sides  $a$  and  $b$ :  $A = \frac{1}{2}(a + b)h$

Use the formula or any other method to calculate the area of each trapezium.

# Task C: Areas of composite shapes

1) Find the area of each composite shape.

a)

b)

c)
