

Name: _____

Multiplicative relationships in circles

Task A: Parts of a circle

1) For each diagram, explain why the length of the line segment is not the **radius**.

2) Fill in the blanks with numbers.

a) The **diameter** of a circle is ____ times the **radius**.

b) A circle with a **radius** of 6 cm has a **diameter** of ____ cm.

c) A circle with a **diameter** of 6 cm has a **radius** of ____ cm.

d) The distance from the centre of a circle to its edge is 10 m.
Its **radius** is ____ m and its **diameter** is ____ m.

e) The furthest distance between two points on the edge of a circle is 24 m.
Its **radius** is ____ m and its **diameter** is ____ m.

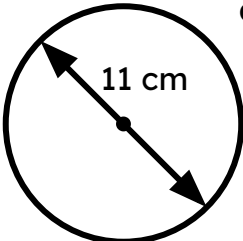

Task B: The relationship between circumference and diameter

1) Fill in the blanks in the table.

radius	0.5	1		5		50
diameter	1	2	6			
circumference	π			10π	24π	

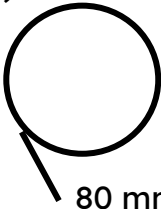

2) Find the missing length in each circle, giving your answer to 3 significant figures.

a) **diameter : circumference**

11 cm : ____ cm

b) **diameter : circumference**

____ mm : 80 mm
