

Perimeter of composite shapes

Task A: Comparing arcs and perimeters of a sector

1) The **arc** and sector are congruent to the one on the circle.

Complete each statement with both a calculation and an answer shown on the right.

The circumference of this circle is

$$2 \times \pi \times 4$$

$$= 8\pi$$

The **arc** length is

$$\frac{1}{4} \times 8\pi$$

$$= 2\pi$$

The perimeter of this sector is

$$2\pi + 8$$

$$4\pi + 4$$

$$2\pi + 4$$

$$\frac{1}{4} \times 16\pi$$

$$\pi \times 4^2$$

$$16\pi \quad 4\pi$$

2) Complete the table. Leave your answers in terms of π .

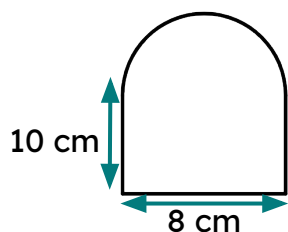

arc	corresponding sector	fraction of a full circle	calculations for arc length	calculations for perimeter of sector
a)		$\frac{1}{2}$	$\frac{1}{2} \times 2 \times \pi \times 6 = 6\pi$	$6\pi + 6 + 6$ $6\pi + 12$
b)		$\frac{1}{4}$	$\frac{1}{4} \times 2 \times \pi \times 16$ $= 8\pi$	$8\pi + 16 + 16$ $8\pi + 32$
c)		$\frac{72}{360} = \frac{1}{5}$	$\frac{1}{5} \times 2 \times \pi \times 10$ $= 4\pi$	$4\pi + 10 + 10$ $4\pi + 20$

Complete the table. Round your answers to 1 decimal place.

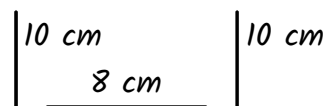

d)		$\frac{1}{6}$	$\frac{1}{6} \times 2 \times \pi \times 24 =$ 25.1 cm	$25.1 + 24 + 24 =$ 73.1 cm
e)		$\frac{1}{3}$	$\frac{1}{3} \times 2 \times \pi \times 27 =$ 56.5 cm	$56.5 + 27 + 27 =$ 110.5 cm
f)		$\frac{1}{9}$	$\frac{1}{9} \times 2 \times \pi \times 45 =$ 31.4 cm	$31.4 + 45 + 45 =$ 121.4 cm

Task B: Finding perimeters of closed composite shapes

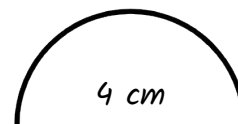

1) The composite shape has been broken down into its component lengths.

a) Write down the length of all three of these straight lines.

b) What is the radius of this semicircle?

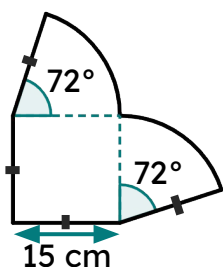

c) Complete this calculation to find the **arc** length of this semicircle.

$$\frac{1}{2} \times 2 \times \pi \times \underline{4} = \underline{4\pi}$$

d) Hence, find the total perimeter of this shape.

$$4\pi + 28 \text{ cm}$$

2) The composite shape has been broken down into its component lengths.

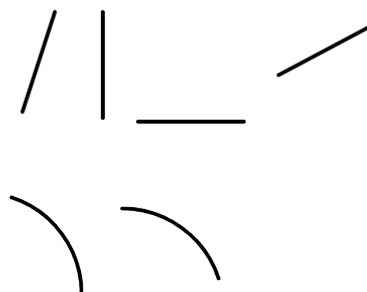

a) Write down the length of all four of these straight lines.

15 cm each or 60 cm total

b) What fraction of a full circle do each of these **arcs** represent?

$\frac{1}{5}$ each, or $\frac{2}{5}$ for both

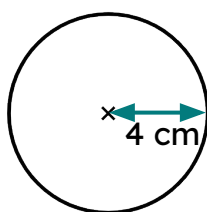

c) Complete this calculation to find the **arc** length of each **arc**.

$$\frac{1}{5} \times 2 \times \pi \times 15 = 6\pi$$

d) Hence, find the total perimeter of this shape.

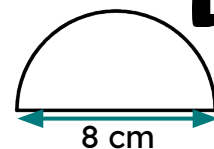

$$12\pi + 60$$

3) Starting with the smallest perimeter, sort these shapes in terms of the size of their perimeters.

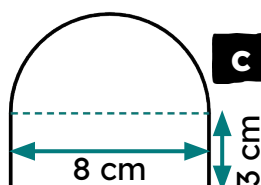

a $8\pi = 25.1 \text{ cm}$

$4\pi + 8 = 20.6 \text{ cm}$

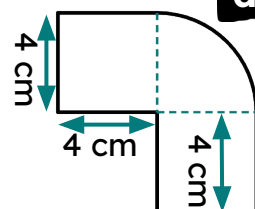

b

c $4\pi + 14 = 26.6 \text{ cm}$

$2\pi + 24 = 30.3 \text{ cm}$

d
