

Checking understanding of place value in metric units

Task A: Different types of unit

- 1) Sort the given units into the relevant categories.

Length	Mass	Capacity
cm	g	ml
km	mg	cl
m	kg	l
mm		

- 2) For each of the following, write down a sensible **metric** unit.

- a) Distance between Poole and London is 179 *kilometres (km)*
- b) The height of a 3 year old child is 98 *centimetres (cm)*
- c) The capacity of a kettle is 1.7 *litres (l)*
- d) The length of a classroom is 6 *metres (m)*
- e) The mass of an apple is 86 *grams (g)*
- f) The capacity of a teaspoon is 5 *millilitres (ml)*

Task B: Prefixes

1) Fill in the appropriate **prefixes** in the blank boxes.

1000	100	10	unit	$\frac{1}{10}$	$\frac{1}{100}$	$\frac{1}{1,000}$
10^3	10^2	10	unit	$\frac{1}{10}$	$\frac{1}{10^2}$	$\frac{1}{10^3}$
kilo			unit		centi	milli

2) Order the units from smallest to largest.

a) litre, **millilitre**, **centilitre**

millilitre, centilitre, litre

b) **kilometre**, **millimetre**, metre, **centimetre**

millimetre, centimetre, metre, kilometre

c) **milligram**, **kilogram**, gram

milligram, gram, kilogram

3) Complete the following statements.

If in the future a new **metric** unit is defined and named an ‘acorn’.

a) A **centiacorn** would be 100 times smaller than an ‘acorn’.

b) A **kiloacorn** would be 1000 times larger than an ‘acorn’.
