

Place value in imperial units

Task A: Understanding imperial units

1) Sort the units into the correct columns.

metric	imperial
<i>metres</i>	<i>inches</i>
<i>kilograms</i>	<i>miles</i>
<i>millilitres</i>	<i>feet</i>
<i>centimetres</i>	<i>hands</i>
<i>kilowatts</i>	<i>acres</i>
<i>metric tonnes</i>	<i>tons</i>

2) Sort the **imperial** units according to what they measure.

length	mass	capacity
<i>inches</i>	<i>ounces</i>	<i>fluid ounces</i>
<i>yards</i>	<i>pounds</i>	<i>pints</i>
<i>feet</i>	<i>stone</i>	<i>gallons</i>
<i>miles</i>		

Task B: Converting between imperial units

1) Starting with the smallest, sort the units in ascending order of size.

yards miles inches feet

inches, feet, yards, miles

2) Fill in the missing words.

Jacob is nearly six *feet* tall. He travels to school by getting the bus for five *miles* and then walking thirty *yards*.

yards miles inches feet

3) Use the information given to calculate the conversions.

- a) 5 yards = 15 feet
- b) 12 feet = 4 yards
- c) 2 stone = 28 pounds
- d) 160 ounces = 10 pounds
- e) 2 yards = 72 inches
- f) 3 yards and 1 foot = 120 inches
- g) 240 inches = 6 yards and 2 feet
