

Name: _____

Place value in imperial units

Task A: Understanding imperial units

1) Sort the units into the correct columns.

metric	imperial

metres

inches

miles

kilograms

millilitres

feet

centimetres

hands

acres

kilowatts

tons

metric tonnes

2) Sort the **imperial** units according to what they measure.

length	mass	capacity

inches

pints

stone

yards

gallons

ounces

feet

miles

pounds

fluid ounces

Task B: Converting between imperial units

1) Starting with the smallest, sort the units in ascending order of size.

yards miles inches feet

2) Fill in the missing words.

Jacob is nearly six _____ tall. He travels to school by getting the bus for five _____ and then walking thirty _____.

yards miles inches feet

3) Use the information given to calculate the conversions.

- a) 5 yards = feet
- b) 12 feet = yards
- c) 2 stone = pounds
- d) 160 ounces = pounds
- e) 2 yards = inches
- f) 3 yards and 1 foot = inches
- g) 240 inches = yards and feet

$\times 3 \rightarrow$		$\times 12 \rightarrow$
yards	feet	inches
$\leftarrow \div 3$		$\leftarrow \div 12$

$\times 14 \rightarrow$		$\times 16 \rightarrow$
stone	pounds	ounces
$\leftarrow \div 14$		$\leftarrow \div 16$
