

Checking understanding of plotting coordinates

- 1 The coordinate $(0, 0)$, where the x and y axes cross, is called the origin. Fill in the blank

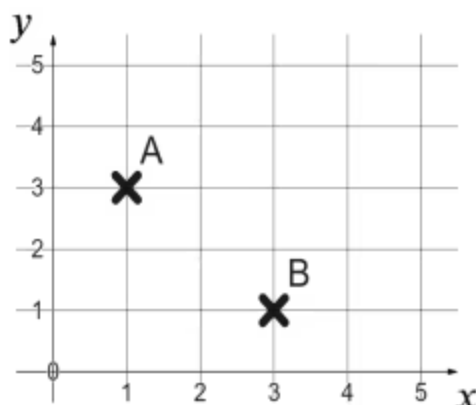

- 2 Which language best describes this coordinate position? Tick **1** correct answer

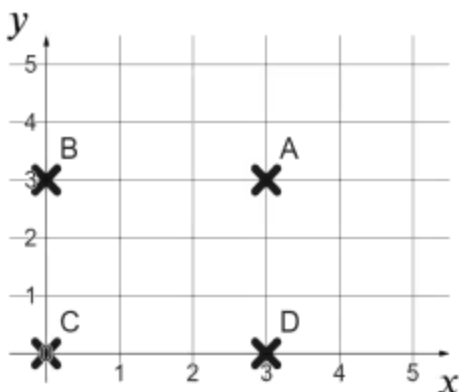

- ☐ 4 along, 2 up.
- ☐ 4 right, 2 up.
- ☐ 4 in the x direction, 2 in the y direction.
- ☐ 4 in the positive x direction, 2 in the positive y direction.
- ☒ From the origin, 4 in the positive x and 2 in the positive y direction.

- 3 What are the coordinates of points A and B? Tick **1** correct answer

- ☐ A(3, 1), B(1, 3)
- ☐ A(1, 3), B(1, 3)
- ☐ A(3, 1), B(3, 1)
- ☒ A(1, 3), B(3, 1)

4 Match the points to the correct coordinate. Write the correct letter in each box

a	A
b	B
c	C
d	D

d	(3, 0)
a	(3, 3)
c	(0, 0)
b	(0, 3)

5 If you take the coordinate (2, 1), add 5 to the x-coordinate and leave the y-coordinate unchanged, which of these best describes the change in position of the point? Tick **1** correct answer

- ☐ It will reflect in the x-axis.
- ☐ A translation by 5 in the negative y-direction.
- ☐ A translation by 5 in the negative x-direction.
- ☒ A translation by 5 in the positive x-direction.
- ☐ A translation by 5 in the positive y-direction.

- 6 Coordinates A, B and C form a triangle. If you add 2 to the y coordinate of all three points, where will the triangle translate to? Tick **1** correct answer
