

Checking understanding of plotting coordinates

Task A: Plotting coordinates in the first quadrant

1) The coordinate $(0,0)$ where the x and y axes cross is called the *origin*.

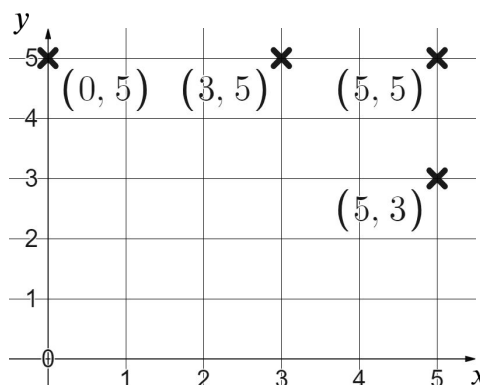

2) **Plot** these coordinates and label them:

$(3,5)$

$(5,3)$

$(5,5)$

$(0,5)$

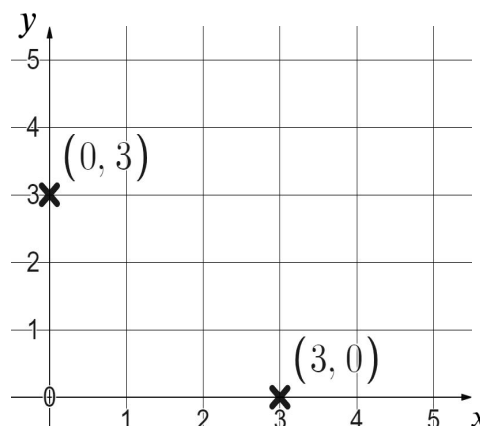

3) Izzy **plots** the coordinate $(3,0)$.

Write a sentence to explain her error.

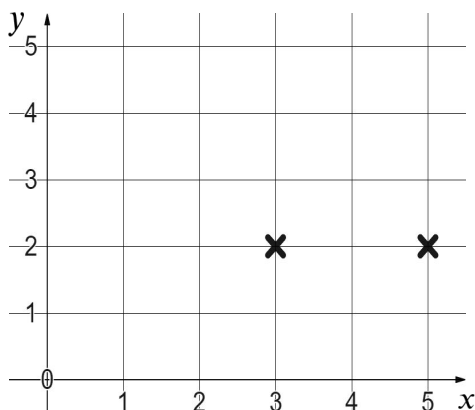

Your sentence might have read, ' $(3,0)$ is three in the positive x direction, then zero in the y direction from the origin. Izzy did it the other way round'.

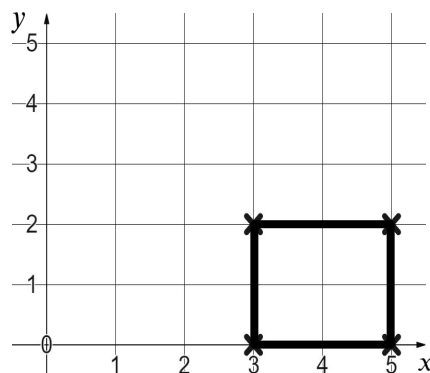

Task B: Using coordinates to plot shapes

1) The first two coordinates are (3,2) and (5,2)

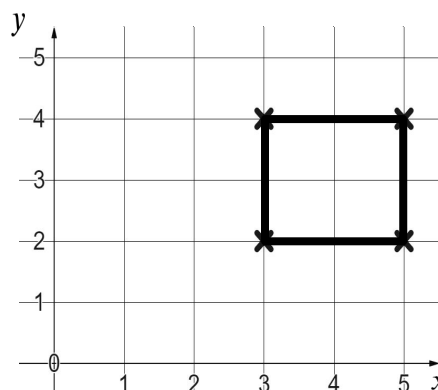

Which other coordinate pairs would form a square?

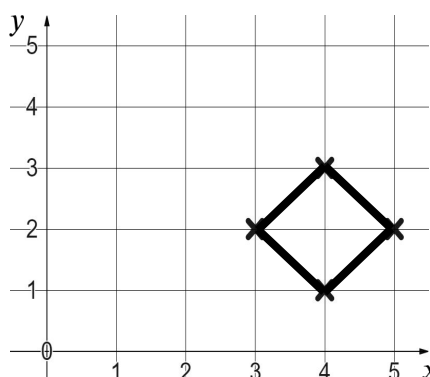

*(3,0) and (5,0)
make a square.*

*(3,4) and (5,4)
make a square.*

*(4,1) and (4,3)
make a square.*

Task C: Translating shapes

1) Why will the below not create a **translation** of rectangle ABCD?

- A (1,5) → (4,5)
- B (1,1) → (3,1)
- C (2,1) → (5,1)
- D (2,5) → (5,5)

*The four points did
not all follow the
same rule.*
