

Securing understanding of plotting coordinates

1 We call the vertical axis in the Cartesian coordinate system the _____. Tick **1** correct answer

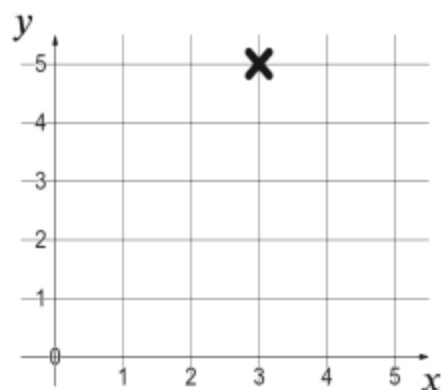

- ☐ x-axis
- ☒ y-axis
- ☐ straight axis
- ☐ upright

2 Which language best describes this coordinate position? Tick **1** correct answer

- ☐ 5 along, 2 up.
- ☐ 5 right, 2 up.
- ☐ 5 in the x direction, 2 in the y direction.
- ☐ 5 in the positive x direction, 2 in the positive y direction.
- ☒ From the origin, 5 in the positive x and 2 in the positive y direction.

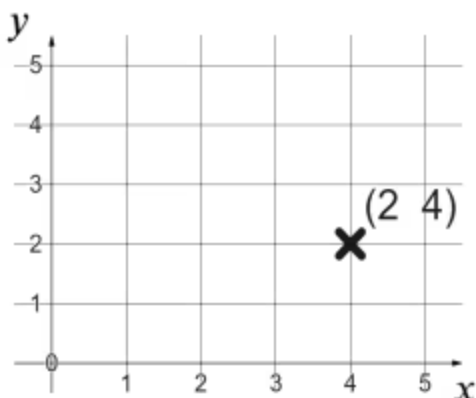

3 What is this coordinate? Tick **1** correct answer

- ☒ (3, 5)
- ☐ $x = 3, y = 5$
- ☐ (5, 3)
- ☐ $x = 5, y = 3$

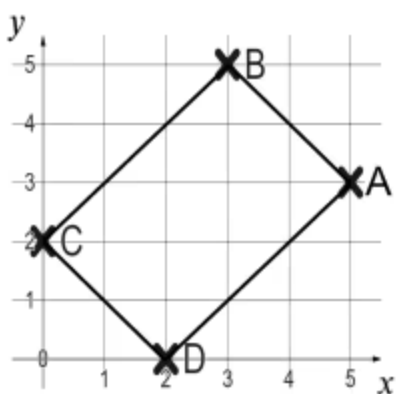

4 What's wrong with the labelling of this coordinate? Tick 2 correct answers

- ☐ Nothing.
- ☐ We always use dots, not crosses to mark coordinates.
- ☒ There is no comma between the x and y coordinates.
- ☒ The x and the y coordinates are the wrong way round.

5 Match the coordinates for the vertices of this rectangle. Write the correct letter in each box

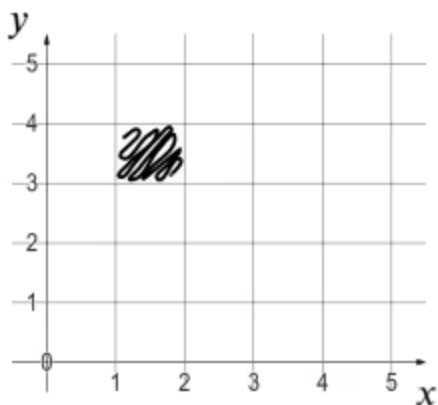

a	A
b	B
c	C
d	D

b	(3, 5)
a	(5, 3)
d	(2, 0)
c	(0, 2)

- 6 Alex says, "That's the coordinate $(2, 4)$. I've gone right two squares and up four". What has Alex misunderstood? Tick **1** correct answer

- ☐ Nothing. He is correct.
- ☒ A coordinate is a single point, not a shaded region.
- ☐ For the coordinate $(2, 4)$ he should have gone four right and two up.
