

Plotting coordinates generated from a rule using technology

- 1 What coordinate has been plotted on this set of axes? Fill in the blank

$(-3, 4)$

- 2 What coordinate has been plotted on this set of axes? Fill in the blank

$(2.5, -1.5)$

- 3 Which of these statements about the scale on a set of axes are true? Tick 2 correct answers

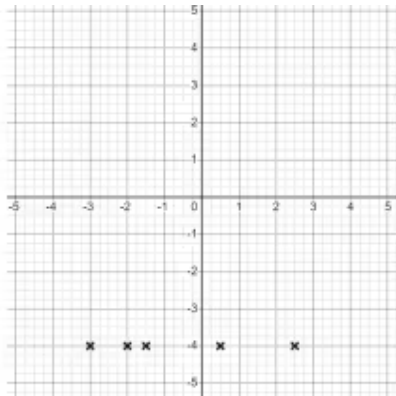

- ☐ The x axis and the y axis have to have the same scale as each other.
- ☒ The scale has to be the same in the positive and negative x direction.
- ☐ The y axis has to have a step of 1.
- ☒ The x axis can have a step of 5.
- ☐ The x axis can increase in 1s until the number 10 then increase in 10s.

- 4 What word can we use to refer to the point where the x axis and y axis cross? Fill in the blank

origin

- 5 What rule links the coordinates plotted on the graph shown? Tick **1** correct answer

- ☐ $y = 4$
☐ $x = 4$
☐ $x = -4$
☒ $y = -4$
☐ $y = -x$

- 6 These three coordinates are plotted: $(-3, -10)$ $(4.5, 8)$ $(-3, 8)$. What fourth coordinate would you need to plot to form a rectangle? Fill in the blank

$(4.5, -10)$
