

Plotting a relationship

- 1 What is the minimum number of coordinates you need to plot to draw a straight line? Fill in the blank

2

- 2 Which of these is the correct way to draw the line of the rule $y = 2$? Tick **1** correct answer

☐
☒
☐
☐

- 3 True or false: The coordinate (5,9) will lie on the line $y = x + 4$ Tick **1** correct answer

☒

True- The y coordinate equals the x coordinate plus 4

☐

False- The x coordinate equals the y coordinate plus 4

☐

There is no way of knowing without drawing the line

- 4 Match the coordinate with the equation for the line it will lie on Write the correct letter in each box

a	(3,6)
b	(-3,6)
c	(5,10)
d	(2,7)

b	$y = -2x$
c	$y = 3x - 5$
d	$y = 5x - 3$
a	$y = x + 3$

- 5 Fill in the missing y coordinate so this coordinate lies on the line $y = \frac{1}{2}x + 4$ (8, 8) Fill in the blank
- 6 Fill in the missing y coordinate so this coordinate lies on the line $y = -7x - 15$ (-3, 6) Fill in the blank
