

Using an outcome tree to display outcomes for more than two events

- 1 Trial: spinning spinner X twice and spinning spinner Y once. The incomplete outcome tree shows this trial. Which outcomes could go in place of the letter a? Tick 2 correct answers

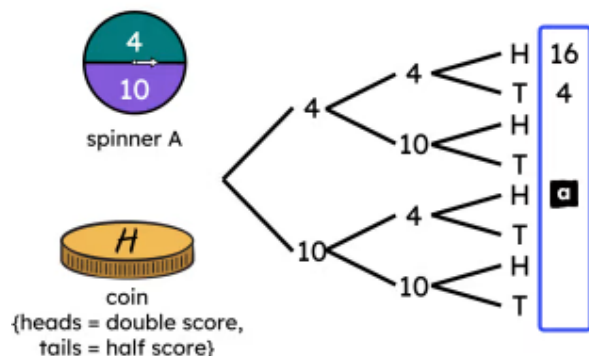

- 2 Trial: spinning spinner X twice and spinning spinner Y once. Which of these statements could be true for the highlighted set of branches on this incomplete outcome tree? Tick **2** correct answers

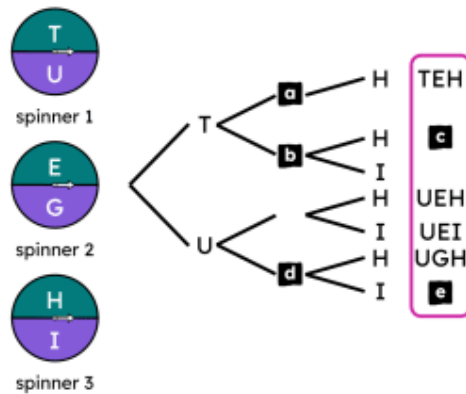

- ☐ Spinner X lands on 7 and spinner Y lands on 9.
- ☐ Spinner Y lands on 7 and spinner X lands on 9.
- ☒ Spinner X lands on 7, and then lands on 2. Spinner Y lands on 9.
- ☒ Spinner X lands on 7, and then lands on 7. Spinner Y lands on 9.
- ☐ Spinner X lands on 7. Spinner Y lands on 9, and then lands on 9.

- 3 Trial: a coin {heads, tails} is flipped three times. The number of outcomes there are in this trial is 8. Sketch an outcome tree to help you. Fill in the blank

- 4 Trial: Spinner A is spun twice and coin flipped. The outcome of each spin is added together. This incomplete outcome tree shows all the trial's outcomes. The value of a in the sample space is 28. Fill in the blank

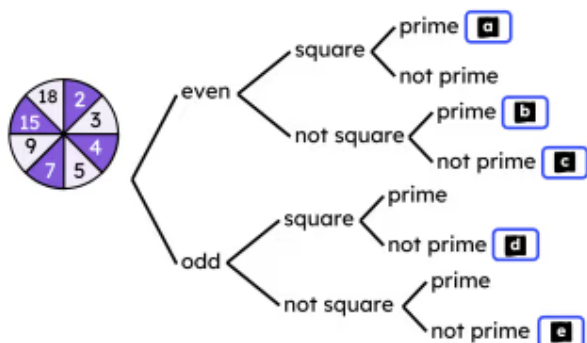

- 5 Trial: spinners 1, 2, and 3 will be spun once each. This incomplete outcome tree represents all outcomes of this trial. Match a, b, c, d, and e to the correct outcome of the trial or stage Write the correct letter in each box

a	a
b	b
c	c
d	d
e	e

c	TGH
b	G
e	UGI
a	E
b	G

- 6 Trial: spinning this spinner once. Event 1: even number. Event 2: square number. Event 3: prime number. Match each letter to its outcome. Write the correct letter in each box

a	a
b	b
c	c
d	d
e	e

a	not possible
b	2
e	15
c	18
d	9
