

Using an outcome tree to display outcomes for more than two events

- 1 Trial: The coin and spinner are both spun once each. Which of these statements are true?
Tick 2 correct answers

coin
{heads, tails}

spinner

- ☒ There are 2 stages to this trial.
- ☐ There are 14 stages to this trial.
- ☐ There are 2 outcomes from this trial.
- ☐ There are 14 outcomes from this trial.
- ☒ There are 24 outcomes from this trial.

- 2 Trial: Spinner R and spinner T will both be spun once. The outcomes of this trial are represented on this outcome tree. In total there will be 15 branches in layer 2 of the outcome tree. Fill in the blank

spinner R

spinner T

layer 1
(spinner R)

layer 2
(spinner T)

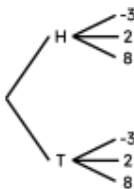

- 3 Trial: flipping the coin and spinning the spinner once each. Which of these are representations that show the complete sample space of this trial? Tick 2 correct answers

coin
{heads, tails}

spinner

☐

☒

	H	T
-3	-3H	-3T
2	2H	2T
8	8H	8T

☒

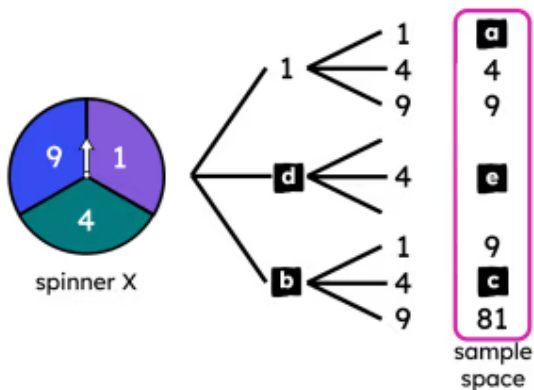

H-3 T3
T2 H2
T-3 T3

☐

- 4 Trial: spinning this spinner once. Event: factor of 84. This event and its opposite event are represented on an outcome tree. The number of outcomes that should be written inside the box is 5. Fill in the blank

- 5 This incomplete outcome tree represents all outcomes from spinning spinner X twice and multiplying the results of each spin. Match each letter in the sample space to its value. Write the correct letter in each box

a	a
b	b
c	c
d	d
e	e

d	4
c	36
b	9
e	16
a	1

- 6 Trial: spinning this spinner once. Event 1: even number. Event 2: square number. The outcome that should be written inside the box is 10. Fill in the blank
