

Name: _____

Using a Venn diagram to display outcomes for more than two events

Task A: Venn diagrams

1) A spinner has the possible outcomes of {3, 5, 6, 8, 10, 12, 15, 18, 20, 25}.

Event A = {odd numbers}, event B = {factors of 30} and event C = {multiples of 3}.

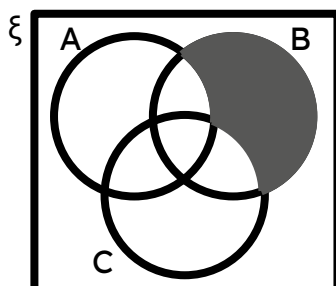

Draw a **Venn diagram** to show this information.

2) There are 20 playing cards. Each card is either red(R) or black(B) and a number from 1 to 10. For example, R3 is a red number 3.

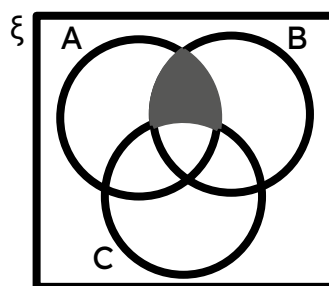

Event A = {black cards}, event B = {even number} and event C = {factor of 10}.

Draw a **Venn diagram** to show this information.

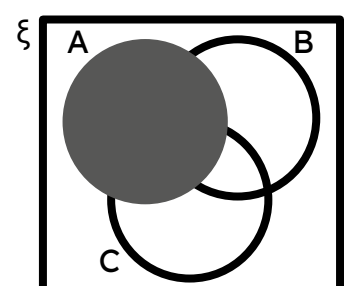

3) Match the statements to the shaded areas.

outcomes of event A

outcomes of event B only

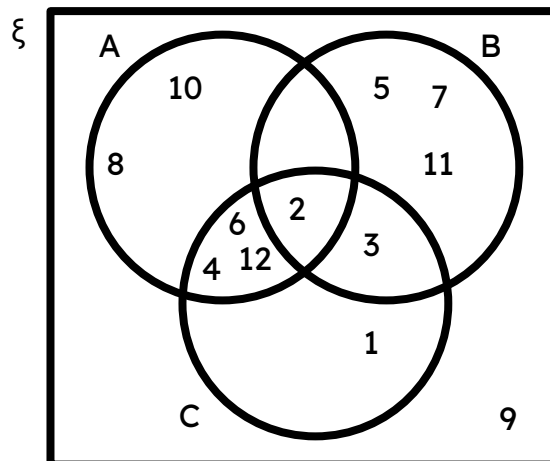

outcomes of event A and
event B but not event C

Task B: Outcomes from Venn diagrams

1) Use this Venn diagram to answer the following questions:

- List the outcomes in event A
- List the outcomes in event C
- List the outcomes in both event B and event C
- List the outcomes that are only in event B
- List the outcome that is not in any of the events

2) The Venn diagram, shows which pupils have chosen history (H), maths (M) or psychology (P) as their GCSE choices.

- Which pupils have chosen to study history?
- Which pupils have chosen to study history and psychology?
- Complete this section of the outcome tree
