

Comparing representations of outcomes for more than two events

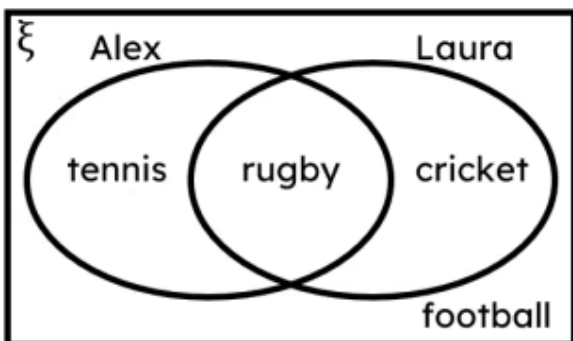

- 1 The Venn diagram shows the sample space $\xi = \{2, 7, 77, 104\}$. Match each region to the correct outcome. Write the correct letter in each box

a	Region a
b	Region b
c	Region c
d	Region d

	77
	104
	7
	2

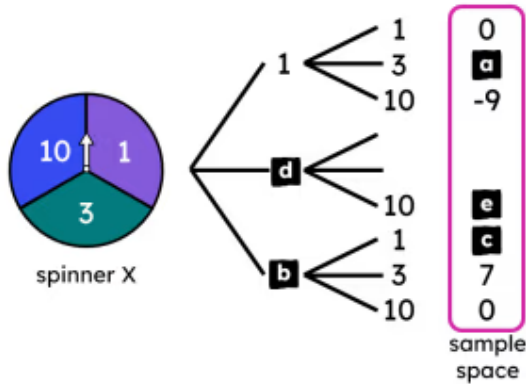

- 2 The Venn diagram shows a selection of sports that Alex and Laura do and do not like. Which of these statements is true? Tick **1** correct answer

- ☐ Both Alex and Laura like cricket.
- ☐ Alex likes cricket, but Laura does not like cricket.
- ☐ Alex does not like cricket, but Laura likes cricket.
- ☐ Neither Alex nor Laura like cricket.

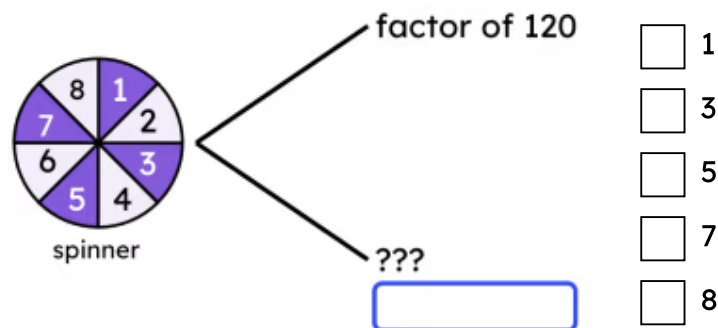

- 3 This incomplete outcome tree represents all outcomes from spinning spinner X twice and subtracting the outcome of spin 2 from spin 1. Match each letter to its value in the sample space. Write the correct letter in each box.

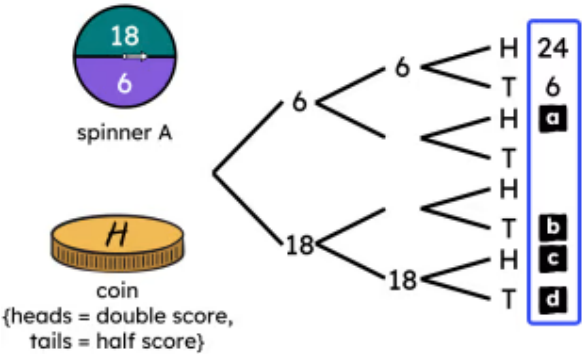

a	a
b	b
c	c
d	d
e	e

	10
	-2
	3
	-7
	9

- 4 Trial: spinning this spinner once. Event: factor of 120. This event and its opposite event are represented on an outcome tree. Which outcome should be written inside the box? Tick **1** correct answer.

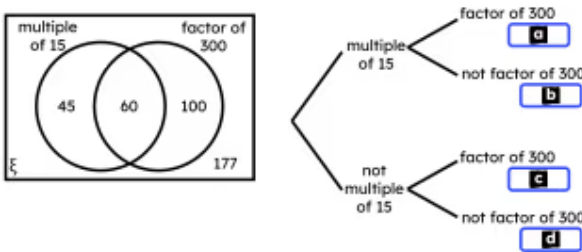

5 Trial: Spinner A is spun twice and coin is flipped. The outcome of each spin is added together. This incomplete outcome tree shows all the trial's outcomes. Match each letter on the tree to its value. Write the correct letter in each box

a	a
b	b
c	c
d	d

	18
	12
	48
	72

6 Both the Venn diagram and outcome tree represent the same two events from a trial. Match the outcome from the Venn diagram to the missing outcome from the outcome tree. Write the correct letter in each box

a	a
b	b
c	c
d	d

	45
	177
	100
	60
