

The scale of likelihoods

Task A: Introducing the scale of likelihoods

1) For each spinner, write down whether the likelihood of it landing on 'win' is **impossible**, unlikely, **even chance**, likely or **certain**.

2) Aisha, Izzy, Jacob, Lucas and Sofia are playing a game that involves rolling a regular six-sided dice to determine if you can move.

The information below shows what each person needs to roll in order to move their piece forward.

Aisha
factor of 24

Izzy
multiple of 1

Jacob
factor of 25

Sofia
non-integer

Lucas
prime number

Represent the likelihood of each person moving their piece on the scale of likelihoods by writing the first letter of their name in the correct space.

Task B: Comparing the likelihood of events on the sale

1) A game that involves drawing a card from the deck below to determine who moves.

The information shows what a card needs to contain to allow each person to move.

Aisha
vowel

Izzy
consonant

Jacob
prime number

Sofia
factor of 24

Lucas
square number

Represent the likelihood of each person moving their piece on the scale of likelihoods by writing the first letter of their name in the correct space.

2) A set of spinners each only contain two possible outcomes: 'win' or 'lose'.

The likelihood for each spinner landing on 'win' (W) is shown on the scales below.

Mark the position that represents the likelihood of losing (L) on each spinner.
