

Experiments to determine how likely an outcome is

1 _____ is a single predefined test. Tick **1** correct answer

- ☐ An event
- ☐ An outcome
- ☐ A sample space
- ☐ A trial

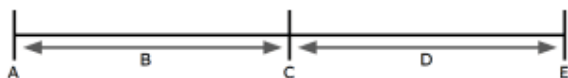

2 The likelihood of an outcome can be described as _____ if its likelihood of happening is the same as its likelihood of not happening. Tick **1** correct answer

- ☐ certain
- ☐ even chance
- ☐ impossible
- ☐ likely
- ☐ unlikely

3 Which statement describes the meaning of 'unlikely'? Tick **1** correct answer

- ☐ An outcome has less chance of happening than not happening.
- ☐ An outcome has the same chance of happening as not happening.
- ☐ An outcome has a greater chance of happening than not happening.

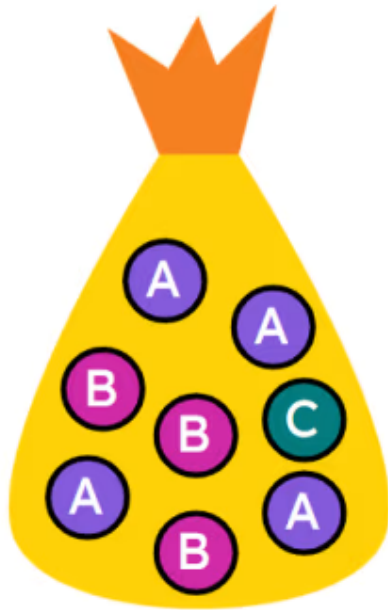

4 Which term belongs at point E on the scale of likelihoods? Tick **1** correct answer

- ☐ certain
- ☐ even chance
- ☐ impossible
- ☐ likely
- ☐ unlikely

- 5 A bag contains counters that are each labelled with a letter from A to C. One counter is chosen at random from the bag. Which term describes the likelihood of choosing the letter 'B'? Tick **1** correct answer

- ☐ impossible
- ☐ unlikely
- ☐ even chance
- ☐ likely
- ☐ certain

- 6 A regular six-sided dice is rolled. Match the events with the term that describes their likelihood of happening. Write the correct letter in each box

a	rolling a factor of 6
b	rolling an integer
c	rolling a multiple of 6
d	rolling a negative number
e	rolling a prime number

	impossible
	even chance
	unlikely
	likely
	certain
