

Using lists to display outcomes for two events

Task A: Possible outcomes from a two stage trial

1) Set 1 Set 2

Jacob has listed some of the possible outcomes, when selecting one card from each set.

A☆	A♣	A*	D♥
C☆	B♦	B♠	B*
B♥	C♦	C♣	A♦
D*	B☆	D♣	C*
D♠	D♥	A♠	D♦

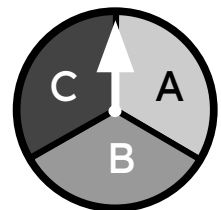

a) What outcomes has Jacob missed from his list?

b) What outcomes has Jacob duplicated?

Task B: Systematic listing

1) A fair six-sided dice and the spinner shown are to be rolled and spun simultaneously.

a) List the possible outcomes **systematically**.

b) How many possible outcomes are there?

2) A fair coin and a fair six-sided dice are flipped and rolled simultaneously.

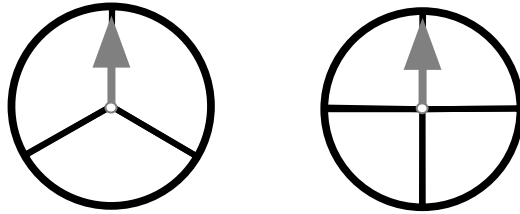

a) List the possible outcomes **systematically**

b) How many possible outcomes are there?

3) Two spinners are going to be spun.

The possible outcomes are
{A1, A2, A3, B1, B2, B3, C1, C2, C3}.

Complete the spinners.

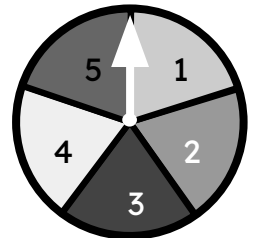

Task C: Listing outcomes of two events

1) Laura and Andeep are playing a game using this spinner. Laura wins a point if it lands on a **factor of 10** and Andeep wins a point if it lands on a **prime number**.

a) List the outcomes that win Laura a point.

b) List the outcomes that win Andeep a point.

c) List the outcomes for when neither Laura nor Andeep win a point.

d) List the outcomes for when Laura and Andeep both win a point.

e) List the outcomes for when Laura wins a point, but Andeep does not.
