

Using an outcome tree to display outcomes for two events

1 The outcome tree represents all outcomes from spinning the spinner once. Which outcomes are missing from the outcome tree? Tick 2 correct answers

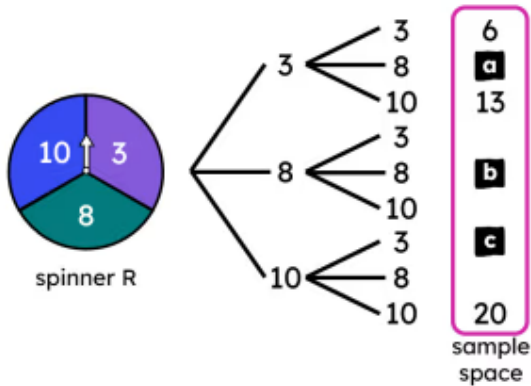

2 The outcome tree represents all outcomes from spinning spinner P and spinner Q once each. Match each letter to its value. Write the correct letter in each box

a	a
b	b
c	c

	27
	8
	16

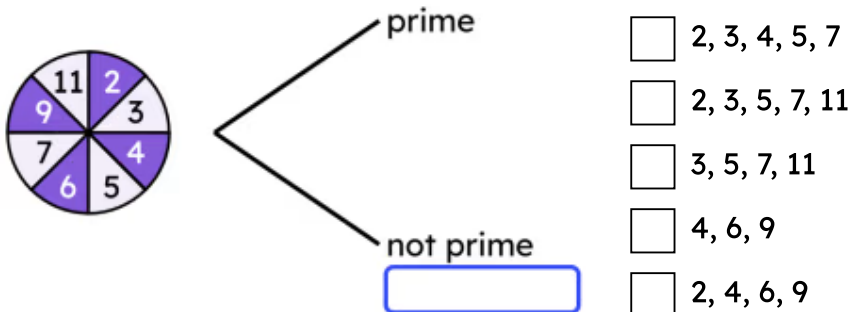

- 3 This outcome tree represents all outcomes from spinning spinner R twice. The sample space shows the outcomes when the results of each spin are added. Match each letter to its value. Write the correct letter in each box

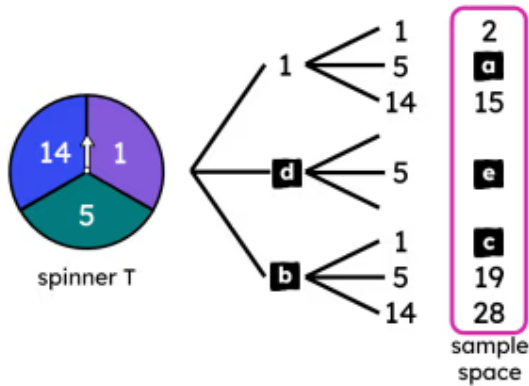

a	a
b	b
c	c

	11
	16
	13

- 4 Trial: spinning this spinner once. Event: the spinner landing on a prime number. Which group of outcomes should be written inside the box? Tick 1 correct answer

- 5 This incomplete outcome tree represents all outcomes from spinning spinner X twice and adding the results of each spin. In the sample space, match the letter to its value. Write the correct letter in each box

a	a
b	b
c	c
d	d
e	e

	5
	15
	10
	14
	6

- 6 Trial: spinning this spinner once. Event 1: the spinner landing on a even number. Event 2: the spinner landing on a square number. Which of these outcomes should be written inside the box? Tick 2 correct answers
