

Using an outcome tree to display outcomes for two events

Task A: Outcome trees for two-stage trials

1) This spinner will be spun once.
Complete the **outcome tree** for this single-stage trial.

3) Spinner 3 will be spun twice.

a) Complete the **outcome tree**.
b) Complete the **sample space** for this **outcome tree**.

2) Spinners 1 and 2 will be spun once each.

spinner 1

spinner 2

a) What do the two branches in the box represent?

b) Complete this **outcome tree**.

4) Spinners 4 and 5 are spun once each and have these outcomes:

spinner 4 = {A, B}

spinner 5 = {red, blue}

Complete this **outcome tree** and **sample space**.

5) Spinners 6 and 7 will be spun once each.

Complete the **outcome tree** from its **sample space**.

6) Spinners 8 and 9 will be spun once each.

Fill in the outcomes of each spinner from the **outcome tree**.

Task B: Outcome trees from two events

1) This spinner will be spun once.

a) Complete this **outcome tree**.

b) The spinner lands on an 11. Using the **outcome tree**, which two events have just happened?

2) A spinner has outcomes of: {5, 9, 15, 25, 28, 441}
Complete this **outcome tree**.

3) A spinner has outcomes of: {1, 4, 8, 16, 25, 27, 30, 36, 39, 64}.

Jacob is going to spin this spinner and looks for the events of landing on a square number that is also a cube number.

Jacob

a) Draw and complete an **outcome tree** for this trial.

b) How many outcomes match the events that Jacob is looking out for?

4) In a cafe they have the following drinks on the menu.

a) Create an outcome tree with the first event being “has a handle” and the second “has a straw”.

b) On your tree circle the outcomes that represent straw but no handle.
