

Checking listing possible outcomes

1 In probability, what is a 'trial'? Tick **1** correct answer

- ☐ a representation used to model probability questions
- ☐ a set of all possible outcomes
- ☐ a single predefined test
- ☐ a way to list outcomes systematically

2 A _____ is all the possible outcomes of a trial. Tick **1** correct answer

- ☐ event
- ☐ experiment
- ☐ likelihood
- ☐ sample space

3 Which of these numbers is not on a standard six-sided dice? Tick **1** correct answer

- ☐ 3
- ☐ 4
- ☐ 5
- ☐ 6
- ☐ 7

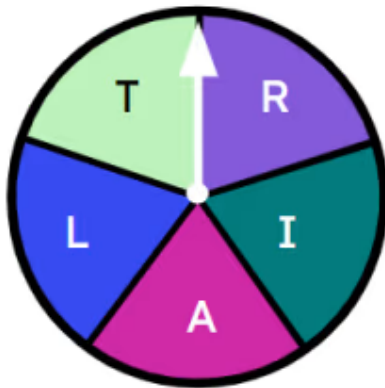

4 Match each trial with its sample space. Write the correct letter in each box

a	$\xi = \{\text{win, lose}\}$
b	$\xi = \{1, 2, 3, 4, 5, 6\}$
c	$\xi = \{\text{heads, tails}\}$
d	$\xi = \{A, E, I, O, U\}$

	A regular six-sided dice is rolled.
	A spinner containing "win" and "lose" is spun.
	A bag contains tiles each of which is a vowel. A tile is picked.
	A coin is flipped once.

5 Complete the following sample space for the outcomes of the spinner. $\xi = \{A, I, L, T, \underline{\hspace{2cm}}\}$. Fill in the blank

6 How many possible outcomes are there on this spinner? Fill in the blank
