

Calculating theoretical probabilities from probability trees (two events)

- 1 What is the sum of the possible events A, B and C in this probability tree? Tick **1** correct answer

- ☐ 1
- ☐ $\frac{7}{8}$
- ☐ $\frac{1}{8}$
- ☐ $\frac{2}{8}$

- 2 In a fair six-sided die, what is the probability of rolling a 2 and getting 'tails' in a single toss of a fair coin? Tick **1** correct answer

- ☐ $\frac{1}{12}$
- ☐ $\frac{1}{6}$
- ☐ $\frac{1}{2}$

- 3 There are two trials. In Trial 1, a spinner with {A, B} is spun twice. In Trial 2, a spinner with {B, C} is spun twice. Which statements are true? Tick **2** correct answers

- ☐ A and C have an equal chance of appearing in the trials.
- ☐ B is more likely to appear in the trials.
- ☐ B is less likely to appear in the trials than A.

4 What is the probability of this spinner landing on a vowel? Tick **1** correct answer

- ☐ 0.4
- ☐ 0.2
- ☐ 0.5
- ☐ 0.6

5 Alex believes that the likelihood of a spinner stopping on a shaded space is equal to an unshaded space. Is Alex correct? Tick **1** correct answer

- ☐ Alex is correct.
- ☐ Alex is incorrect, it is less likely the spinner would land on a shaded space.
- ☐ Alex is incorrect, it is more likely the spinner would land on a shaded space.

6 How many ways are there to get a sum of 7 when adding the results of two standard six-sided dice rolls? Tick **1** correct answer

- ☐ 5
- ☐ 6
- ☐ 7
