

Comparing multiple representations to calculate theoretical probabilities for combined events

1 What is the probability of event A and C happening? Tick **1** correct answer

2 What number does 'b' represent? Tick **1** correct answer

3 An object chosen at random is most likely to be which of the following? Tick **1** correct answer

- ☐ from Set A but not Set B
☐ from Set B but not Set A
☐ From neither Set A nor Set B
☐ From Set A or Set B

- 4 If one of the events below was much less likely to occur than any others, which statement would be true? Tick **1** correct answer

- ☐ The event must be either C, D, E, or F
- ☐ The event must be either B, E or F
- ☐ The event could be any of A, B, C, D, E or F
- ☐ The event can only be D or F

- 5 If each spinner is used once, what is the probability of the first spinner landing on 'A' and the second spinner not landing on '1'? Tick **1** correct answer

- ☐ $\frac{1}{3}$
- ☐ $\frac{1}{6}$
- ☐ $\frac{2}{3}$

- 6 For a single event, what must all possibilities sum to? Tick **1** correct answer

- ☐ 1
- ☐ 10
- ☐ 5
- ☐ 0
