

## Calculating theoretical probabilities from probability tree diagrams (one event)

---

1 What does a probability tree show? (Tick 1 correct answer)

- ☒ All possible outcomes of an event and their probability
- ☐ All possible outcomes of an event only
- ☐ The most likely possible outcomes of an event only.

2 Calculate the probability of event (A) in a probability tree if its branches have probabilities  $\frac{1}{4}$ ,  $\frac{1}{3}$ , and (A)

5/12

3 In a probability tree, each branch shows a possible outcome along with the \_\_\_\_\_ of that outcome happening. (Tick 1 correct answer)

- ☒ probability
- ☐ risk
- ☐ failure
- ☐ guarantee

4 If a probability tree has three branches with two branches having probabilities  $\frac{1}{5}$  and  $\frac{2}{5}$ , what is the probability of the third outcome?

2/5

5 If a two branched probability tree has a branch with probability  $\frac{1}{5}$ , what is the probability of the complementary event?

4/5

6 in a probability tree, branches coming from the same root should all sum to what? (Tick 1 correct answer)

1

impossible to tell

0.5
