

Divisibility tests for 2 and 3

1 _____ is a number's ability to be exactly divided by another number, leaving no remainder. Tick **1** correct answer

- ☐ Squaring
- ☐ Cubing
- ☒ Divisibility
- ☐ Multiplying

2 Sofia says, "All multiples of 2 are even." Is Sofia's statement sometimes true, always true or never true? Tick **1** correct answer

- ☐ Sometimes true
- ☒ Always true
- ☐ Never true

3 Jun says, "All common multiples of 3 and 5 are even." Is Jun's statement sometimes true, always true or never true? Tick **1** correct answer

- ☒ Sometimes true
- ☐ Always true
- ☐ Never true

4 Match each description of a multiple with the correct divisibility test. Write the correct letter in each box

a	For any multiple of 3:
b	For any multiple of 2:
c	For any multiple of 2 and 3:

c	the number is even and sum of the digits is a multiple of 3
b	the digit in the ones column is always a 0, 2, 4, 6 or 8
a	the sum of the digits is a multiple of 3

5 All common multiples of 2 and 3 are: Tick **1** correct answer

- ☐ multiples of 5
- ☒ multiples of 6
- ☐ multiples of 8
- ☐ multiples of 10

6 Match each number with the correct statement. Write the correct letter in each box

a	377 037
b	372 950
c	48 959

<i>b</i>	is a multiple of 2
<i>c</i>	is not a multiple of 2 or 3
<i>a</i>	is a multiple of 3
