

Divisibility tests for 6 and 9

Task A: Divisibility test for multiples of 6

1) Circle the numbers from each list that are divisible by 6.

a) 389 232 890 382 348 997

b) 8992 9374 380 000 34 830

c) 4 44 444 4444 444 444

2) Four students play a computer game. The game has 200 levels. Every time a student moves onto the next level they score 6 points.

Lucas

I have 918 points

Truth because 918 is divisible by 6

I have 1114 points

Not true because 1114 is not divisible by 6

Jacob

Sam

I have 1195 points

Not true as odd numbers are not multiples of 6

I have 1194 points

Truth because 1194 is divisible by 6

Sofia

Who is telling the truth?

Justify your answer for each person.

Task B: Divisibility test for multiples of 9

1) You need to enter a maze through entrance A, B, C, D or E. You are only allowed to step on numbers that are multiples of 9. You can only step vertically or horizontally. You must exit through either F, G, H, I or J.

a) What entrance do you use?

E

b) Draw your path.

c) What exit do you use?

F

2) Using the numbers below, fill in the Venn diagram.
