

Divisibility tests for 4 and 8

1 Which of the following sets of numbers are divisible by 4? (Tick **1** correct answer)

☐ 374 394 473 848

☐ 434 398 247 950

☐ 548 344 840 236

2 Which of the following sets of numbers are divisible by 8? (Tick **1** correct answer)

☐ 376 392 472 848

☐ 434 398 248 950

☐ 482 413 840 234

3 Which of the following sets of numbers are divisible by both 4 and 8? (Tick **1** correct answer)

☐ 12 450 394

☐ 34 564 324

☐ 40 804 830 484

☐ 48 296 896 488

- 4 Match each set of multiples to its correct description. (Write the correct letter in each box)

a	For all multiples of 2 ...
b	For all multiples of 4 ...
c	For all multiples of 8 ...
d	For all multiples of 9 ...
e	For all multiples of 10 ...

	the last two digits are a multiple of 4
	the last three digits are a multiple of 8
	the digit in the ones column is a 0, 2, 4, 6 or 8
	the sum of the digits are a multiple of 9
	the digit in the ones column is a 0

- 5 Select the correct statement. (Tick 1 correct answer)

- ☐ Jun says, "All common multiples of 4 and 8 are in the 32 times table."
- ☐ Sofia says, "All multiples of 4 are in the 8 times table."
- ☐ Aisha says, "All common multiples of 4 and 5 are odd."
- ☐ Sam says, "All common multiples of 2, 4 and 8 are in the 8 times table."

- 6 Jun is given 483, 783, 839, 983 and 893 and says it is not necessary to do a divisibility test for 4 or 8. Which statement explains his reasoning? (Tick 1 correct answer)

- ☐ Very large numbers are unlikely to be divisible by 4 and 8
- ☐ The number is prime.
- ☐ The number is odd.
- ☐ The number is even.
