

Square and cube roots

Task A: Square root

1) Match the square root of the **perfect square** with the correct answer.

$$\sqrt{49} \qquad 6$$

$$\sqrt{225} \qquad 2$$

$$\sqrt{36} \qquad 9$$

$$\sqrt{4} \qquad 7$$

$$\sqrt{81} \qquad 15$$

2) Work out the missing numbers using your knowledge of **perfect squares** and square roots.

a) $5 + \sqrt{\quad} = 15$

b) $30 - \sqrt{\quad} = 28$

c) $\sqrt{\quad} + \sqrt{\quad} = 10$

3) An outdoor party has plot allocation of 100 m^2 for all the guests. The party will have a kitchen/dining area, cake table, square bouncy castle and a car to power the bouncy castle.

Insert all items onto the plot. What is the largest bouncy castle you can put on your plot so there is at least one square gap between each item.

4) Only inserting **perfect square** numbers, fill in the missing gaps.

a) $\sqrt{\quad}$ is closest to $\sqrt{65}$

b) $\sqrt{\quad}$ is closest to $\sqrt{90}$

c) $\sqrt{\quad}$ is closest to $\sqrt{152}$

Task B: Cube root

1) Which of the following will give an integer answer?

$\sqrt[3]{1000}$

$\sqrt[3]{100}$

$\sqrt[3]{8}$

$\sqrt[3]{50}$

$\sqrt[3]{27}$

$\sqrt[3]{1}$

$\sqrt[3]{64}$

2) What is the closest integer to $\sqrt[3]{200}$?

Laura says “It is 6”

Jun says “It is 5”

Who is correct? Explain your answer.

3) Work out the answers to the following using your knowledge of square and cube roots of **perfect square** and **perfect cube** numbers.

a) $\sqrt[3]{125} - \sqrt[3]{1}$

b) $\sqrt[3]{1000} + 8$

c) $\sqrt[3]{1000} + \sqrt[3]{8}$

d) $\sqrt[3]{64} - \sqrt{64}$

4) Izzy has puzzle cube gift for Lucas. The puzzle cube has a length of 4.5 cm. She needs to select the correct gift box. The gift boxes are also cubes. Which gift box is the best choice for the puzzle cube?

Explain your answer.

Volume = 1000 cm^3

Volume = 512 cm^3

Volume = 64 cm^3
