

Generating a sequence using a term-to-term rule

1 Which of these best describes what a term in a sequence is? Tick **1** correct answer

- ☐ The number of patterns in a sequence
- ☐ The first number in a sequence
- ☐ The multiplier to get from one value to the next
- ☐ The difference between successive values
- ☐ An individual diagram or value in a sequence

2 What would be the next value in this sequence if it has a constant additive rule? -1, 6, _____, ... Fill in the blank

3 What would be the next value in this sequence if it has a constant multiplicative rule? -1, 6, _____, ... Fill in the blank

4 Match the next 2 numbers in the sequence which starts 16, 4, ... with the rule the sequence is following. Write the correct letter in each box

a	..., 1, 0.25, ...
b	..., -8, -20, ...
c	..., -2, -5, ...
d	..., -6, -14, ...
e	..., 2, 10, ...

	subtract 12, then subtract 2, then subtract -8 ...
	subtract 12, then subtract 10, then subtract 8 ...
	Multiply the previous term by $\frac{1}{4}$
	halve the previous term and subtract 4
	add (-12) to the previous term

5 Calculate the number halfway between 16 and 34 Fill in the blank

6 Match these calculations to the correct answers. Write the correct letter in each box

a	4.1×0.1
b	$4.1 \div 0.1$
c	41×10
d	41×0.1
e	$410 \div 0.1$

	41
	410
	0.41
	4100
	4.1
