

Expressing an arithmetic sequence

1 The n^{th} term of a sequence is the position of a term in a sequence where n stands for the term number. Fill in the blank

2 In sequences $n = 20$ means what? Tick **1** correct answer

- ☐ 20 is in our sequence.
- ☐ The sequence goes up 20 each term.
- ☒ The 20th term number.
- ☐ The sequence is our 20 times table.

3 In this sequence when $n = 4$ what is the term value? Tick **1** correct answer

Term number (n)	1	2	3	4	5
Term value (T)	1	4	7	10	13

- ☐ 4
- ☒ 10
- ☐ 7
- ☐ 1
- ☐ 13

4 In this sequence when $T = 4$ what is the term number? Tick **1** correct answer

Term number (n)	1	2	3	4	5
Term value (T)	1	4	7	10	13

- ☐ $n = 4$
- ☒ $n = 2$
- ☐ $n = 5$
- ☐ $T = 2$
- ☐ $T = 5$

- 5 What general rule links pattern number (n) to number of squares (T) in this case? Tick **1** correct answer

☒ $T = n \times 4 + 3$

☐ $T = n + 4$

☐ $T = n \times 4 - 1$

☐ $T = n + 3$

- 6 What general rule links pattern number (n) to the perimeter of each shape? Tick **1** correct answer

☐ $+ 2$

☐ $n + 2$

☐ $12, 14, 16, \dots$

☐ $n \times 4$

☒ $n \times 2 + 10$
