

Finding the n th term

- 1 The n^{th} term is the position of a term in a sequence (n is the term number). It can be used to calculate any term so is also known as a _____ for finding the n^{th} term. Tick **1** correct answer

- ☐ formula
☐ sequence
☐ variable

- 2 What is the term-to-term rule for this pattern sequence? Tick **1** correct answer

- ☐ Multiply by 3
☐ Goes up by 1
☐ Multiply by 3 and add 1
☐ Add 3

- 3 What is the position-to-term rule for this pattern sequence? Tick **1** correct answer

- ☐ Multiply the term number by 3
☐ Add 1 to the previous term
☐ Multiply the term number by 3 and add 1
☐ Add 3 to the previous term

4 Which of these are arithmetic (linear) sequences? Tick **3** correct answers

- ☐ 1, 2, 4, 8, ...
- ☐ 1, 4, 8, 13, ...
- ☐ 1, 4, 7, 10, ...
- ☐ 10, 7, 4, 1, ...
- ☐ 0.4, 0.7, 1, 1.3, ...

5 This pattern represents people seated around an increasing number of tables. If you were asked to find the number of people around 50 tables, which calculation would you do? Tick **1** correct answer

- ☐ 50×4
- ☐ $50 \times 2 + 4$
- ☐ 50×6
- ☐ $4 + 4 + 4 + 4 + 4 + \dots$ fifty times.
- ☐ $50 \times 4 + 2$

6 Order these arithmetic sequences in terms of the size of their common difference. Start with the greatest common difference. Use numbers to show the correct order

	124, 133, 142, 151, ...
	1896, 1888, 1880, 1872, ...
	1852, 1859, 1866, 1873, ...
	-5, 2.5, 10, 17.5 ...
	-101, -87, -73, -59, ...
	2190, 2180, 2170, 2160, ...
	-8, 0, 8, 16, 24, ...
