

Rearranging to solve linear equations

- 1 In order to maintain _____ in an equation, any manipulation must be applied to both sides of the equation. Tick **1** correct answer
- ☒ equality
- ☐ positivity
- ☐ solutions
- ☐ variables
- 2 What must be added to both sides of the equation to turn $x = 7$ into $x + 3 = 10$? Tick **1** correct answer
- ☒ 3
- ☐ $3x$
- ☐ 7
- ☐ 10
- 3 What must be added to both sides of the equation to turn $x + 3 = 10$ into $5x + 3 = 4x + 10$? Tick **1** correct answer
- ☐ 4
- ☐ 5
- ☐ x
- ☒ $4x$
- ☐ $5x$
- 4 (-4) is added to both sides of the equation $9x + 4 = 6$. What is the resulting equation? Tick **1** correct answer
- ☐ $x = -4$
- ☐ $9x = 6$
- ☒ $9x = 2$
- ☐ $5x = 2$

5 $y = \underline{6}$ is the solution to the equation $29 = 6y - 7$ Fill in the blank

6 Solve $2y - 4 = -8$ Tick **1** correct answer

☐ $y = 6$

☐ $y = -6$

☐ $y = 2$

☒ $y = -2$

☐ $y = -4$
