

Brackets in equations

1 Turning the expression $5(y - 2)$ into $5y - 10$ is known as _____ the brackets. Tick **2** correct answers

- ☐ multiplying out
- ☐ erasing
- ☐ factorising
- ☐ expanding

2 $2(x + 4)$ and $2x + 4$ are the equivalent expressions. True or false? Tick **1** correct answer

- ☐ True. There is a 2, an x , and a $+ 4$. That means they are the same.
- ☐ False. 2 lots of $(x + 4)$ is $(x + 4) + (x + 4)$ which is $2x + 8$ not $2x + 4$
- ☐ You cannot know until you know the value of x .

3 Which of these are expressions for the perimeter of this square? Tick **2** correct answers

- ☐ $5y + 3$
- ☐ $4 \times 5y + 3$
- ☐ $4(5y + 3)$
- ☐ $20y + 3$
- ☐ $20y + 12$

4 What equation does this bar model represent? Tick **1** correct answer

☐ $4y = 12$

☐ $4y = 20$

☐ $4y + 12 = 20$

☐ $4y + 20 = 12$

☐ $4(y + 12) = 20$

5 Expand $7(y + 8)$. Tick **1** correct answer

☐ $7y + 8$

☐ $7y + 15$

☐ $7y + 56$

☐ $y + 56$

6 Expand $-7(y + 8)$. Tick **1** correct answer

☐ $7y - 56$

☐ $-7y - 56$

☐ $-7y + 56$

☐ $7y + 56$
