

Solving complex linear equations involving brackets

- 1 You can expand brackets in the expression $2(y + 9) + 2(3y - 7)$ to get the expression $2y + 18 + 6y - 14$. You now have like terms that can be _____. Tick **1** correct answer

- ☐ evaluated
- ☐ subtracted
- ☒ simplified
- ☐ solved

- 2 The perimeter of this rectangle is 154 units. Which equation can be used to find x ? Tick **1** correct answer

- ☐ $9x + 14 = 154$
- ☒ $2(4x + 15) + 2(5x - 1) = 154$
- ☐ $4x + 15 = 5x - 1 = 154$
- ☐ $2(4x + 15) + 2(5x - 1)$

- 3 The perimeter of this rectangle is 154 units. The value of x is 7. Fill in the blank

- 4 Which of these are accurate first steps when solving $4(3x - 1) - 2(x + 2) = 72$? Tick **2** correct answers
- ☐ $12x - 1 - 2x + 2 = 72$
- ☐ $12x - 4 - 2x + 4 = 72$
- ☒ $12x - 4 - 2x - 4 = 72$
- ☐ $2(3x - 1) - (x + 2) = 72$
- ☒ $2(3x - 1) - (x + 2) = 36$
- 5 The solution to $4(3x - 1) - 2(x + 2) = 72$ is $x = \underline{8}$. Fill in the blank
- 6 The solution to $8(3x - 6) - 5(3x - 6) = 9$ is $x = \underline{3}$. Fill in the blank
