

Problem solving with linear equations

Task A: Solving geometric problems

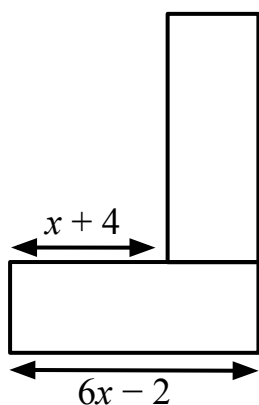

1) The perimeter of this rectangle is 7. Work out the value of x

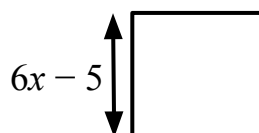

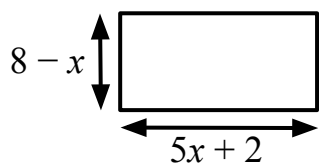

2) Find the perimeter of this equilateral triangle.

3) Two identical rectangles make this compound shape with perimeter 48.
Work out the value of x

4) The rectangle and the square have equal perimeters. Work out this perimeter.

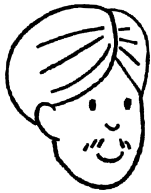

Task B: Forming and solving equations from worded problems

1) a) An electrician has a call out fee and then charges £45 per hour. For an eight hour job they charge £385. Form an equation and calculate their call out fee.

b) Another electrician has a call out fee of £50 and for an eight hour job they charge £370
Form an equation to calculate their hourly rate.

2) Andeep has made two number problems.
Write an equation and find the number in each case.

a) I have a number whereby if you multiply it by 3 and add 60 it's the same as if you multiply it by 7 and minus 8

b) I have another number whereby if you multiply it by 5 and minus 7 it's the same as if you multiply it by 2 and minus 5

3) Jun, Aisha and Jacob are buying a present for classmates.

a) Aisha spends £2 more than Jun and Jacob spends three times as much as Jun. In total they spend £39.50 How much does Jacob spend?

b) Aisha spends £5 more than Jun and Jacob spends four times as much as Aisha. Jacob spends £33 more than Aisha. How much does Jun spend?
