

Solving simple linear equations with a multiplicative step

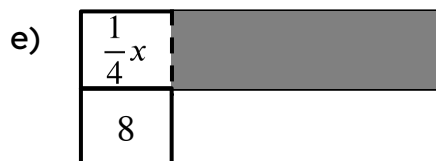

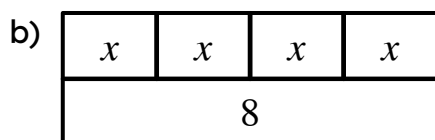

Task A: Multiplicative steps using representations

- 1) Match up the bar models with the calculations which will find the solution. There may be more than one calculation for each diagram.

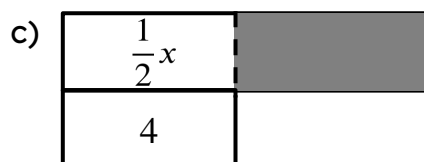

$4 \times \frac{1}{2} \quad 4 \div \frac{1}{4}$

$4 \times 2 \quad 4 \div 2$

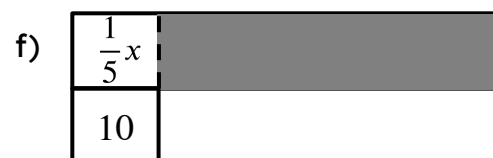

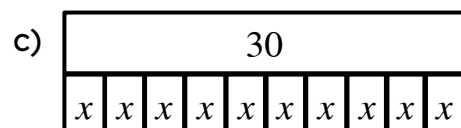

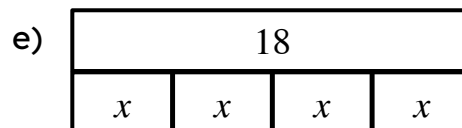

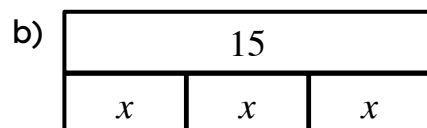

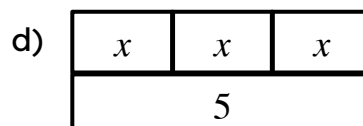

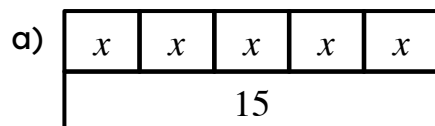

$8 \div \frac{1}{4} \quad 8 \times \frac{1}{4}$

$8 \div 4 \quad 4 \div \frac{1}{2}$

$4 \times 4 \quad 8 \times 4$

- 2) Use these bar models to find the value of x

Task B: Writing solutions algebraically

1) Solve each equation.

a) $2x = 18$

f) $-8x = 18$

b) $6x = 30$

g) $\frac{1}{4}x = 13$

c) $5x = 9$

h) $\frac{2}{3}x = -10$

d) $21x = -21$

i) $-1.4x = 4.2$

e) $-2x = -12$
