

## Introduction to enlargements

---

### Task A: Understanding enlargement

1) Write true or false for each statement.

- a) **Enlargement** only refers to when a shape increases in size.
- b) The image may have different lengths to the object after an **enlargement**.
- c) The image may have different angles to the object after an **enlargement**.
- d) The image can be smaller than the object after an **enlargement**.

2) Alex is going to **enlarge** the parallelogram to double the size.

He thinks that the corresponding angle in the image will be  $70^\circ$ .

Do you think he is correct? Justify your answer.

## Task B: Understanding similarity

1) Match the rectangles that are **similar**.

2) Use square paper to accurately draw the right-angled triangle below.

a) Draw another right-angled triangle that is **similar** to this one.

b) Cut out each triangle. Place one triangle on top of the other and match up one of the vertices. What do you notice?
