

Describing an enlargement

Task A: Using and finding scale factors

1. Parallelogram P has been enlarged to create A, B, C and D.

Calculate the missing lengths on each parallelogram.

2. Tick the diagram that shows a correct enlargement of the small triangle.

Sam draws another enlargement of the small triangle.

One of the lengths is 12 cm. What could the other length be? *8 cm or 18 cm*

Or if the diagonal length is measured as 12 cm then the other two lengths would measure as approximately 6.7 cm and 10 cm.

Task B: How the centre of enlargement affects the image

1. Tick the enlargements that have the same **centre of enlargement**.

A to A' ✓

B to B' ✗

C to C' ✓

2. Describe each transformation fully.

a) A to A'

Object A has been enlarged
by a scale factor of 2,
from the point (2,3)

b) B to B'

Object B has been enlarged
by a scale factor of $\frac{1}{3}$,
from the point (10,4)
