

## Checking and securing understanding of similar triangles

---

1 Which of the following statements is true for these triangles? Tick **1** correct answer

- ☐ The triangles are similar.
- ☐ The triangles are not similar.
- ☐ It is not possible to know whether the triangles are similar or not.

2 For this pair of triangles, can you determine whether they are similar without using side lengths? Tick **1** correct answer

- ☐ Yes, because their three angles correspond.
- ☐ No because you only know two angles.
- ☐ No, because you always need a side and two angles.

3 Would a triangle ABC with sides  $AB = 8\text{cm}$ ,  $BC = 6\text{cm}$ ,  $AC = 10\text{cm}$  be similar to the one shown in the diagram? Tick **1** correct answer

- ☐ Yes
- ☐ No

4 Which of these statements accurately describes mathematical similarity in shapes?  
Tick **1** correct answer

- ☐ Their only difference is their angles. Their sides are in the same proportions.
- ☐ Their only difference is their size. Their sides are in the same proportions.
- ☐ Their only difference is their sides. Their area is exactly the same.

5 Which statement is true? Tick **1** correct answer

- ☐ A triangle with the same perimeter as the one shown would always be similar.
- ☐ A triangle with the same area as the one shown would always be similar.
- ☐ A triangle with the same area as the one shown would not always be similar.

6 What is the value of  $e$ ? Tick **1** correct answer

- ☐ 1
- ☐ 1.5
- ☐ 2
- ☐ 2.5
