

Checking and securing understanding of similar triangles

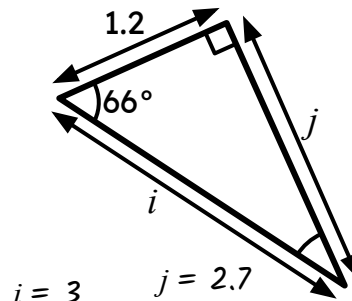

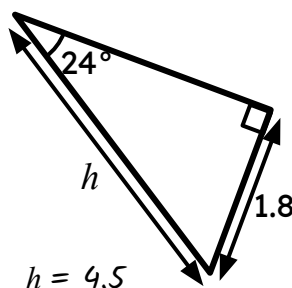

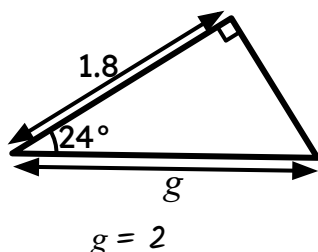

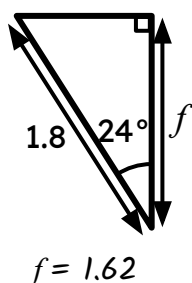

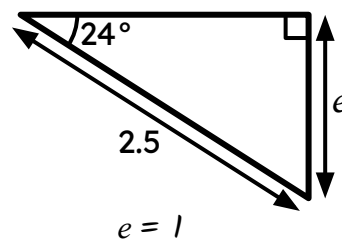

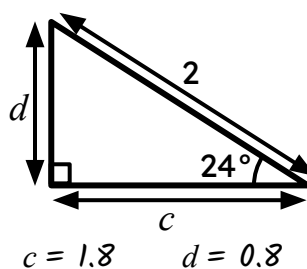

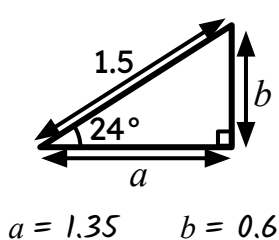

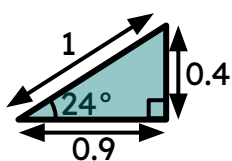

Task A: Identifying similar triangles

- 1) For each triangle, write a tick if it is similar to $\triangle ABC$, a cross if it is not similar and a question mark if there is not enough information to determine similarity. Diagrams are not drawn accurately and all lengths are given in the same units.

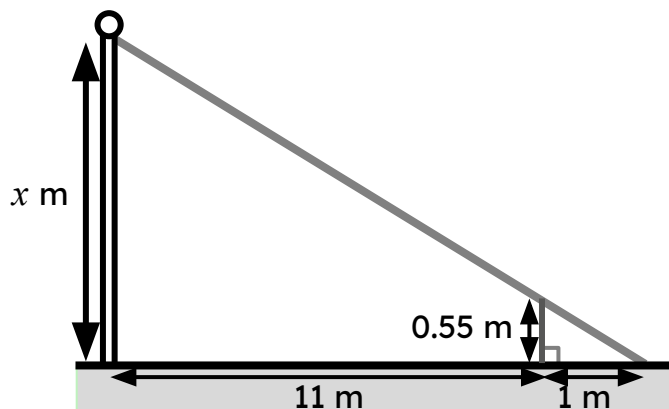

Task B: Finding missing lengths with similar triangles

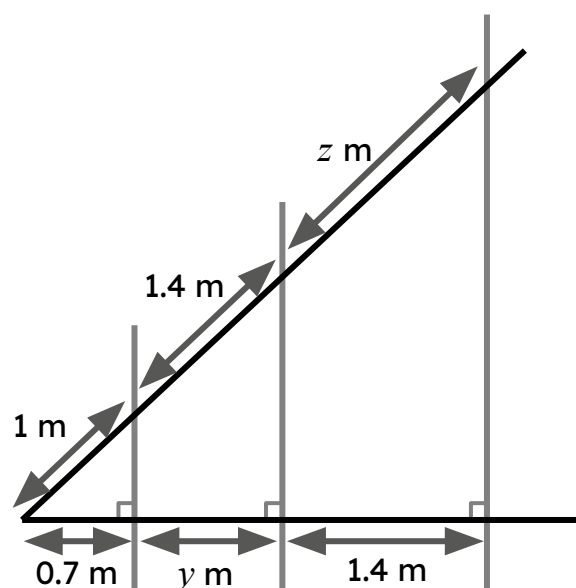

- 1) All lengths are given in cm. Find the values of the unknowns.

2) Find the values of x , y and z .

$$x = 6.6$$

$$y = 0.98$$

$$z = 2$$
