

Choosing the right trigonometric ratio

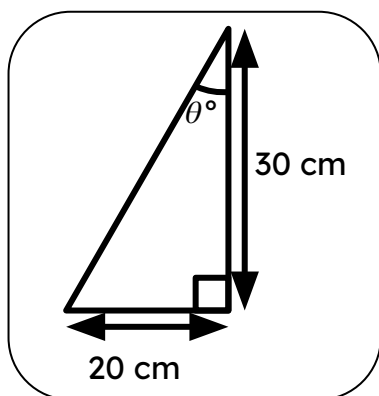

Task A: Choosing the correct trigonometric function

1) Sort these triangles into the table, regarding the most efficient trigonometric function to use.

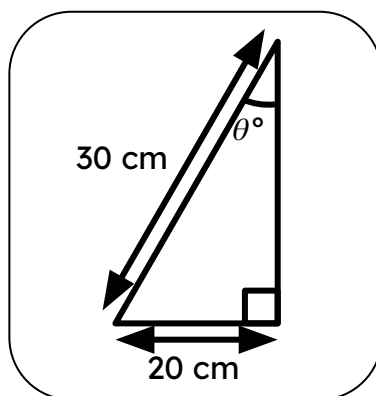

sine	cosine	tangent

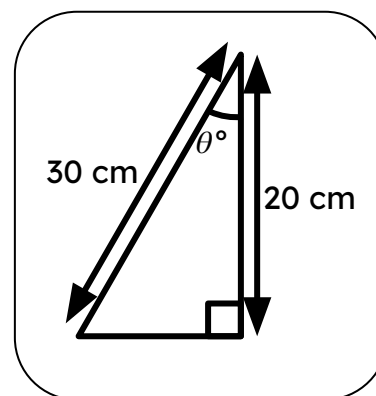

2) Match the equation to the correct triangle.

$$\sin(\theta^\circ) = \frac{20}{30}$$

$$\cos(\theta^\circ) = \frac{20}{30}$$

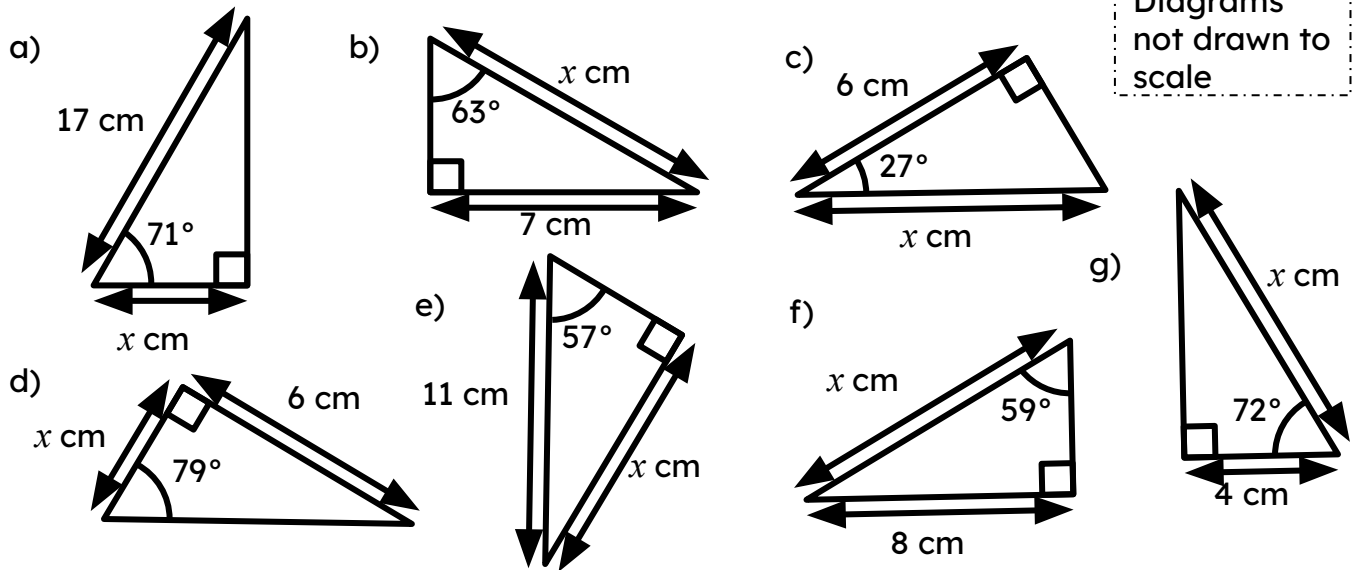

$$\tan(\theta^\circ) = \frac{20}{30}$$

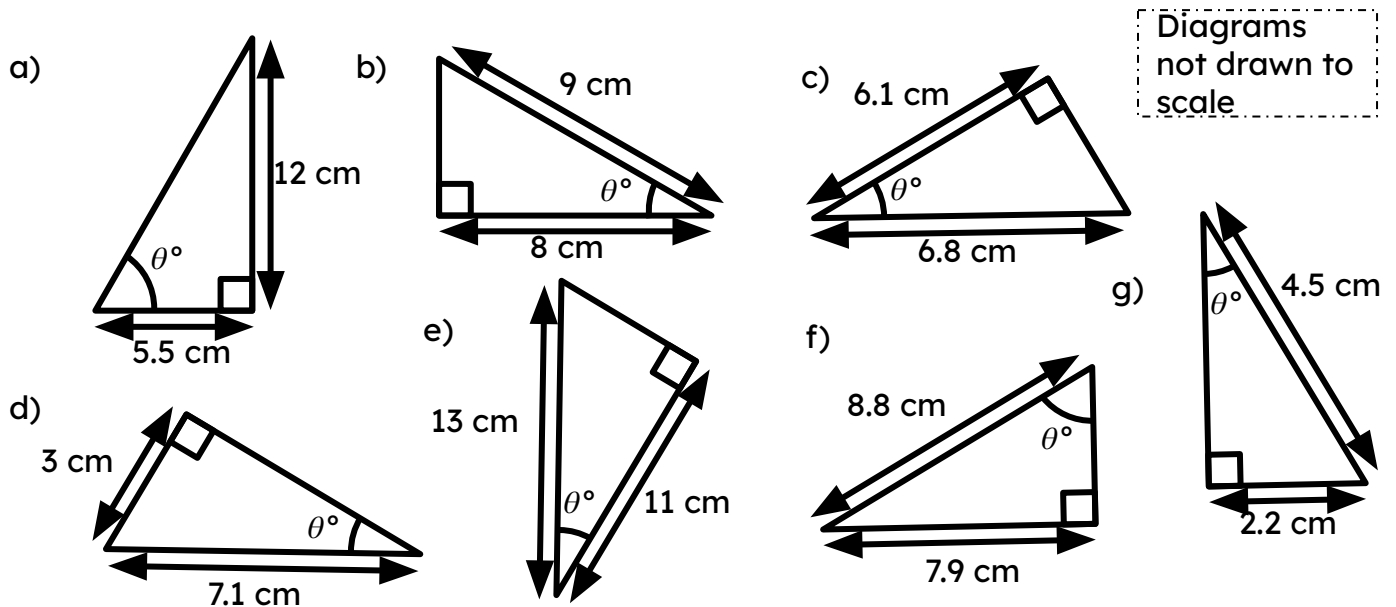

Task B: Using the ratios

1) Calculate the length of the edge marked x , giving your answer to 1d.p.

2) Calculate the size of the angle marked θ , giving your answer to 1d.p.

3) Calculate the size of the angle marked θ or the edge marked y , giving your answer to 1d.p.
