

Checking and securing understanding of Pythagoras' theorem

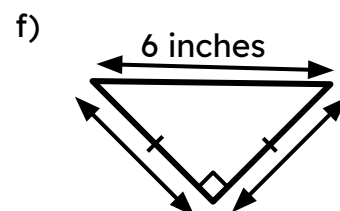

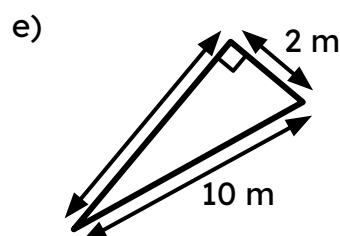

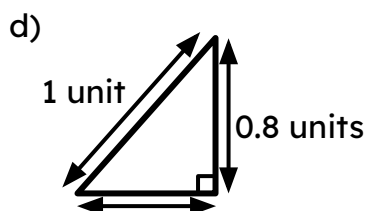

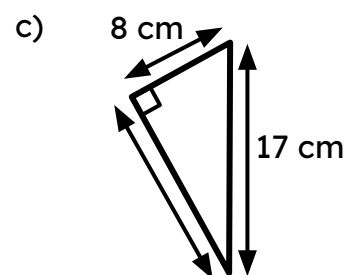

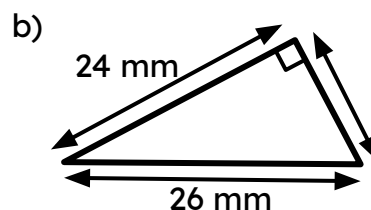

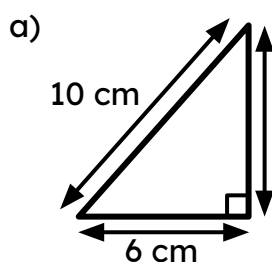

Task A: Finding the length of the hypotenuse

1) Find the missing lengths. Give any decimal lengths to 1 decimal place.

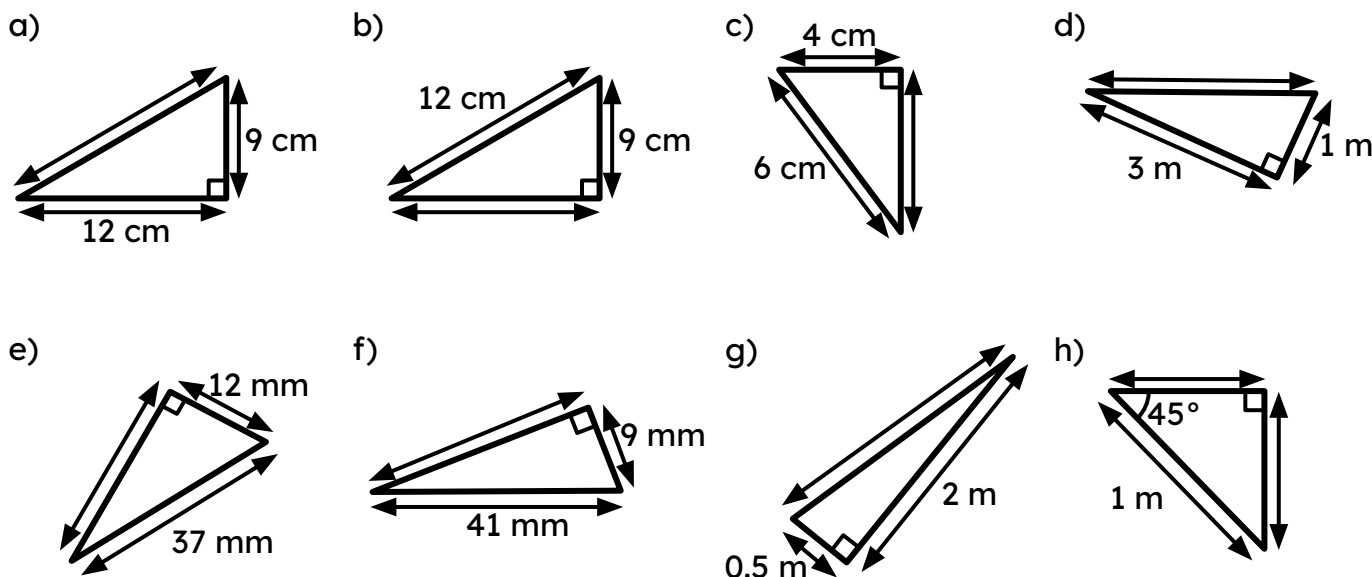

Task B: Finding the length of a shorter side

1) Find the missing lengths. Give any decimal lengths to 1 decimal place.

Task C: Finding the length of any side

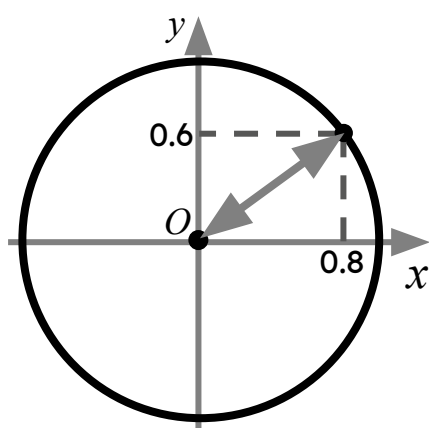

1) Find the missing lengths. Give any decimal lengths to 1 decimal place.

Task D: Using Pythagoras' theorem on a coordinate grid

1) Point P has coordinates (7, 24). How far is point P from the origin?

2) What is the length of the radius of the circle?

Diagrams are not drawn to scale.

3) The diagram shows quarter of a circle on a coordinate grid.

What is the value of a (to 1 d.p.)?
