

Tangent ratio

- 1 Match the estimated values with the trigonometric functions below. Write the correct letter in each box

a	$\sin(23^\circ)$
b	$\cos(39^\circ)$
c	$\tan(22^\circ)$
d	$\tan(45^\circ)$

	0.39
	0.777
	1
	0.404

- 2 For which value of θ is $\tan(\theta)$ undefined? Fill in the blank

- 3 In a right triangle, if you are provided with θ and the opposite side, which function would you use to find the adjacent side? Tick **1** correct answer

- ☐ Sine
- ☐ Cosine
- ☐ Tangent

- 4 Which of these is a rearrangement of $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$ Tick **1** correct answer

- ☐ $\tan(\theta) = \frac{\text{adj}}{\text{opp}}$
- ☐ $\text{opp} = \frac{\tan(\theta)}{\text{adj}}$
- ☐ $\text{adj} = \frac{\text{opp}}{\tan(\theta)}$

5 Which of these is not an rearrangement of $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$ Tick **1** correct answer

☐ $\text{adj} = \frac{\text{opp}}{\tan(\theta)}$

☐ $\tan(\theta) \times \text{adj} = \text{opp}$

☐ $\tan(\theta) = \frac{\text{adj}}{\text{opp}}$

6 For a right triangle ABC, if angle CBA = 33° , and the adjacent side to that angle is 1 cm, what is the length of the side opposite angle CBA? Tick **1** correct answer

☐ 0.545 cm (3 d.p)

☐ 0.649 cm (3 d.p)

☐ 1 cm
