

Using the sine ratio

Task A: Ratio tables, the unit circle, and tangents

1) Substitute the labelled sides and angle in each triangle into these two versions of the sine formula.

For each triangle, choose the most appropriate version of the sine formula to find the length of its missing side.

$$h \times \sin(\theta^\circ) = \text{opp}$$

$$\boxed{} \times \sin[\boxed{}] = \boxed{}$$

$$\frac{\text{opp}}{\sin(\theta^\circ)} = h$$

$$\frac{\boxed{}}{\sin[\boxed{}]} = \boxed{}$$

$$h \times \sin(\theta^\circ) = \text{opp}$$

$$\boxed{} \times \sin[\boxed{}] = \boxed{}$$

$$\frac{\text{opp}}{\sin(\theta^\circ)} = h$$

$$\frac{\boxed{}}{\sin[\boxed{}]} = \boxed{}$$

2) Match the triangle to the equation showing the relationship between its hypotenuse and an opposite side.

Use the equation to find the length of the missing side labelled x on each triangle (2 d.p.)

d) $x \times \sin(32^\circ) = 50$

e) $50 \times \sin(32^\circ) = x$

f) $32 \times \sin(50^\circ) = x$

3) By using the sine formula, find the length of the missing side labelled with a letter for each of these triangles (2 d.p.)

4) Find the lengths of the distances a , b , c , and d (rounded to the nearest integer).

Task B: Calculating angles using the sine formula

angle	sine	cosine	tangent
0	0	1	0
5	0.087	0.996	0.087
10	0.174	0.985	0.176
15	0.259	0.966	0.268
20	0.342	0.94	0.364
25	0.423	0.906	0.466
30	0.5	0.866	0.577
35	0.574	0.819	0.7
40	0.643	0.766	0.839
45	0.707	0.707	1
50	0.766	0.643	1.192
55	0.819	0.574	1.428
60	0.866	0.5	1.732
65	0.906	0.423	2.145
70	0.94	0.342	2.747
75	0.966	0.259	3.732
80	0.985	0.174	5.671
85	0.996	0.087	11.43
90	1	0	∞

1) Using this table of trig values, find the size of each missing angle marked with a letter.

2) By drawing appropriate lines on this part of a unit circle, estimate the size of each angle marked with a letter (to the nearest integer).

$$\sin(a^\circ) = \frac{12}{15} = 0.8$$

$$a^\circ = \boxed{}$$

3) Use your calculator to find the size of each angle marked with a letter (1 d.p.)

$$\sin(a^\circ) = \frac{9}{24}$$

$$a^\circ = \sin^{-1}\left(\frac{9}{24}\right) = \boxed{}$$

$$\sin(b^\circ) = \text{---}$$

$$b^\circ = \sin^{-1}(\text{---}) = \boxed{}$$
